# Artificial Intelligence in Medicine: Definitions, Implications, and Future Impact

**Patrick M. Pilarski, Ph.D.**

*Canada Research Chair in Machine Intelligence for Rehabilitation  
Division of Physical Medicine and Rehabilitation, Dept. of Medicine  
Fellow, Alberta Machine Intelligence Institute (Amii)*

# C.O.I. Disclosure

**No affiliation (financial or otherwise) with pharmaceutical, medical device or medical communications organizations.**

*Other Industry Affiliations:*

Senior Staff Research Scientist and Office Co-Lead, *DeepMind*  
Vice Board Chair, *Alberta Machine Intelligence Institute*

# Learning Objectives (1)

- **Be able to define artificial intelligence (AI), machine learning (ML), and related concepts from the field of intelligent systems.**
  - **Be able to describe and discuss the defining characteristics of AI and ML.**
  - **Be able to describe and discuss how AI has been applied in medicine (specifically with regard to psychiatry).**
- 

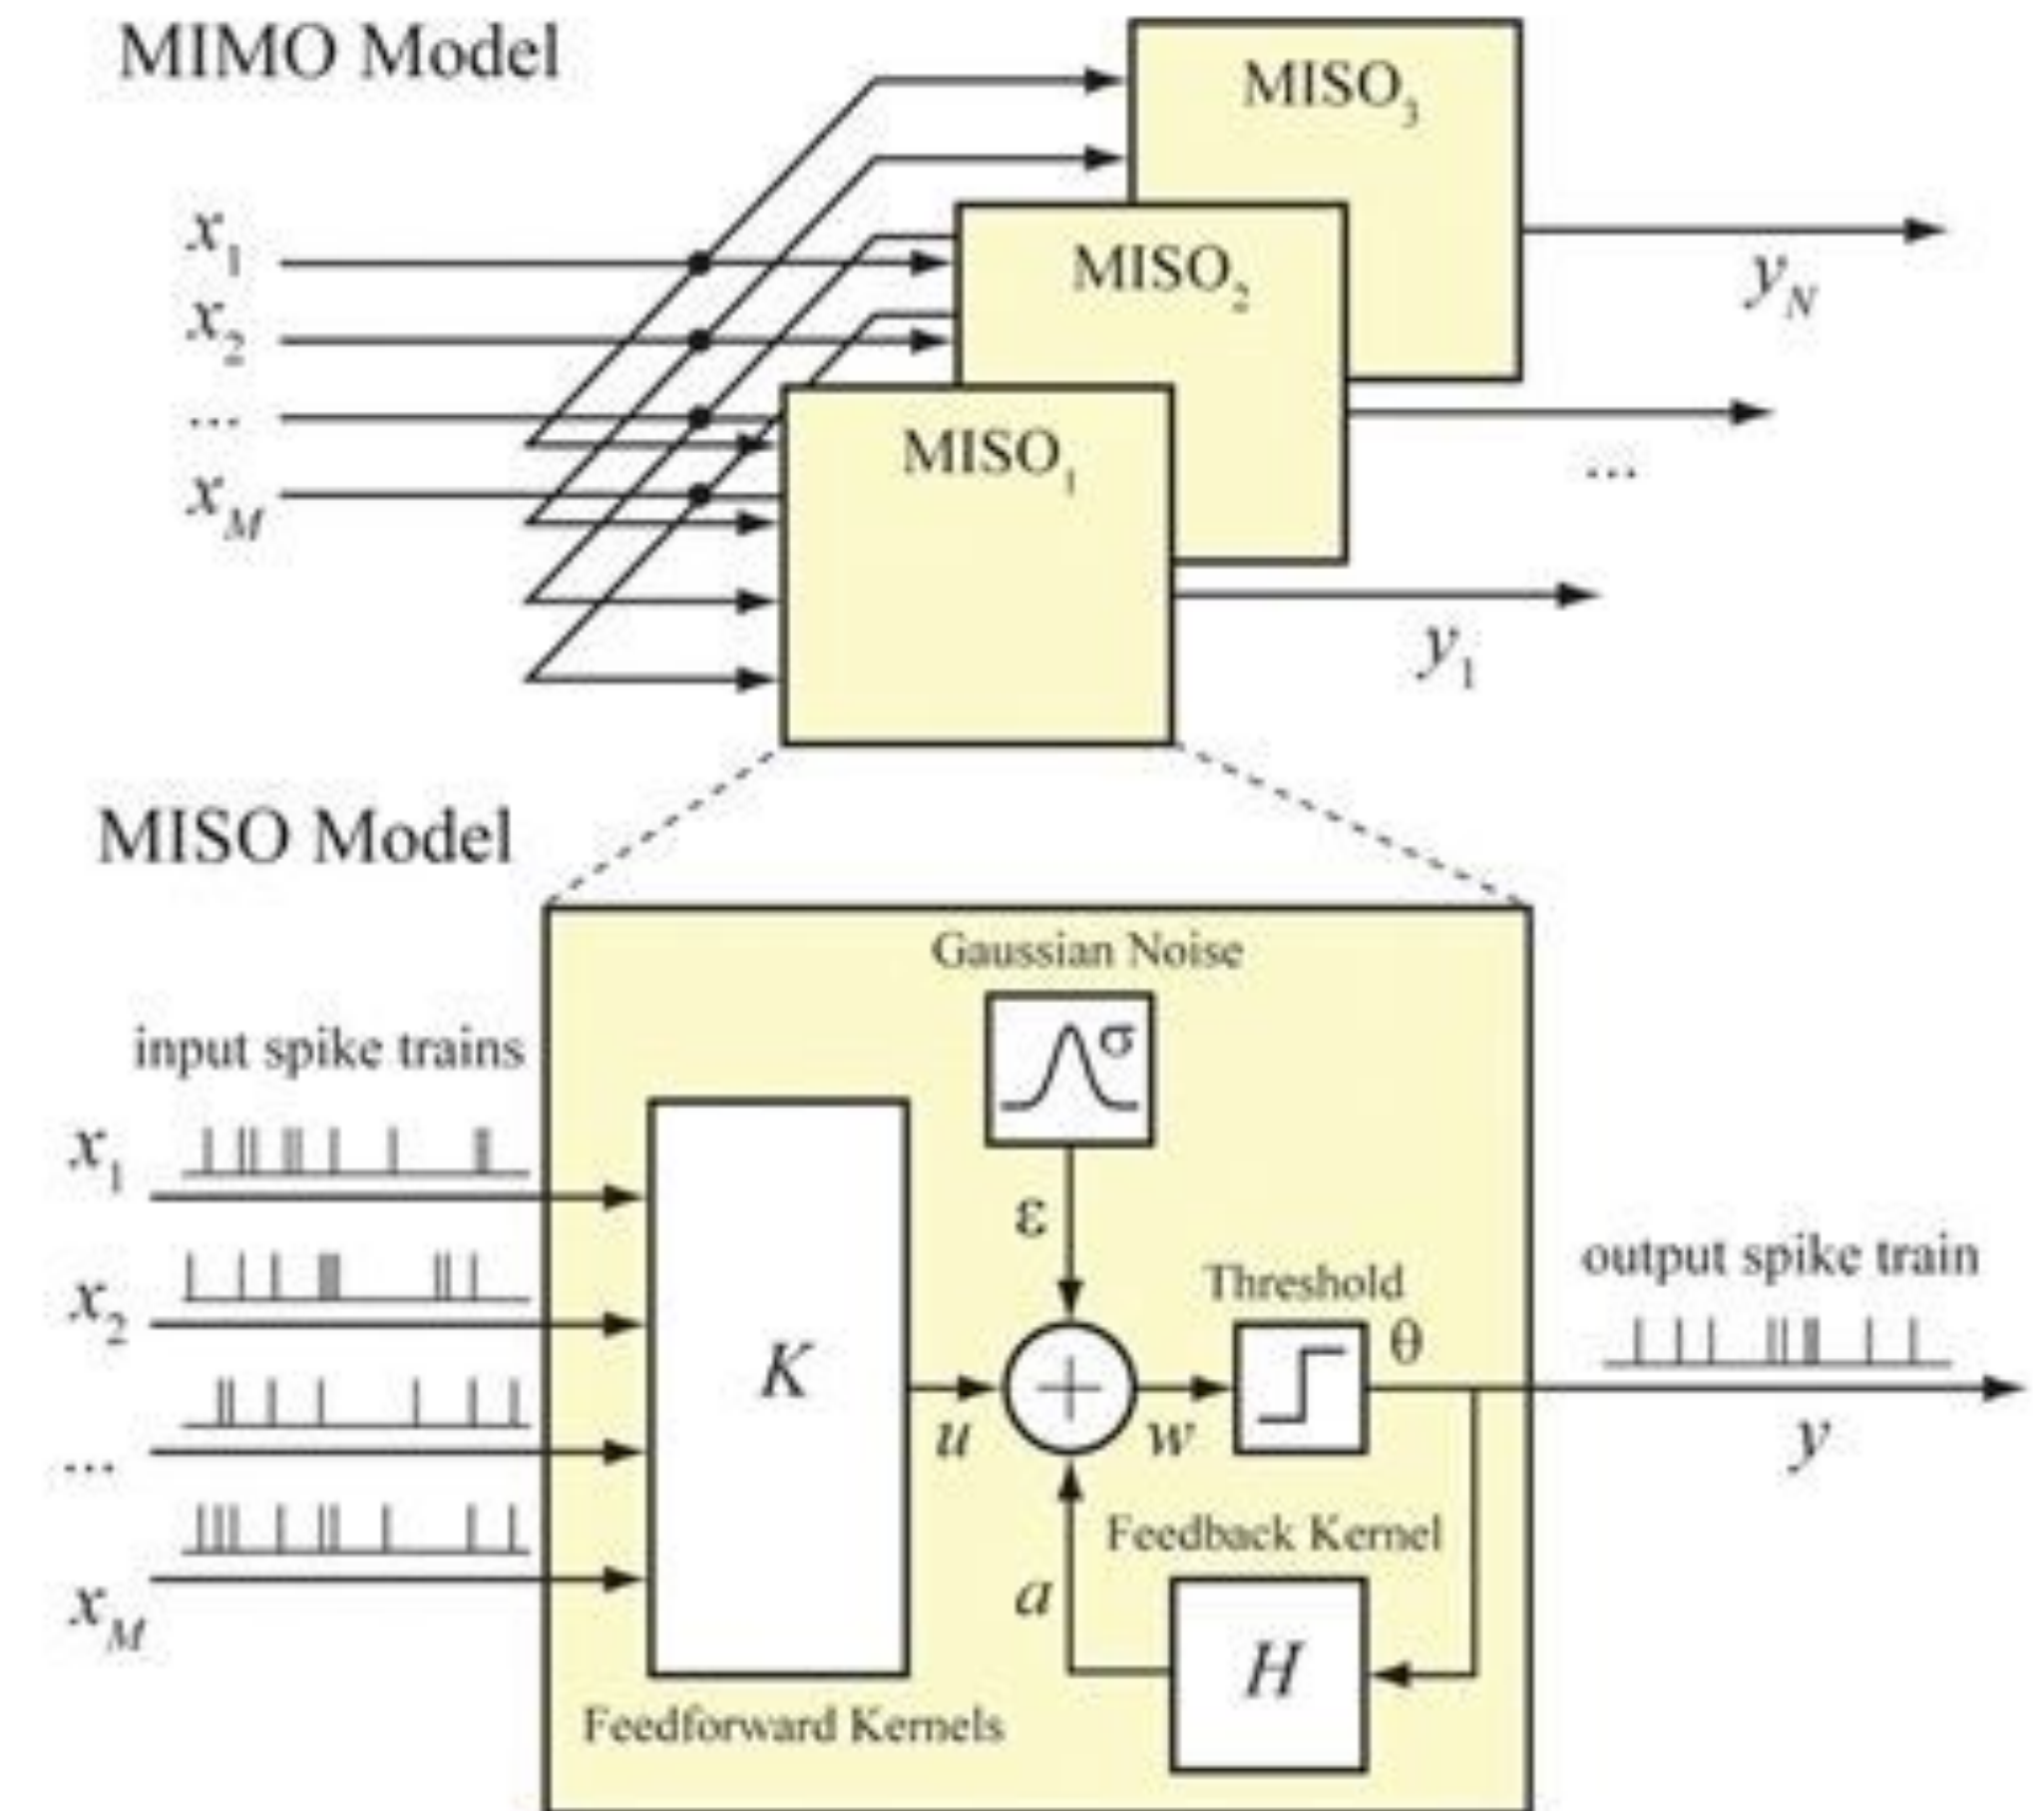

# Learning Objectives (2)

- **Be able to estimate the impact emerging intelligent systems technology will have on your own life, practice, study, or work within the next 5-10 years.**
  - **Be able to find and cite appropriate resources for future self-study on AI and its application within medicine.**
- 

**Direct brain-computer interfaces:** study participant Jan Scheuermann feeding herself with a robotic limb (University of Pittsburgh / UPMC); <http://www.upmc.com/media/media-kit/bci/Pages/default.aspx>

## Perception, Prediction, Action

# Why Machine Intelligence?

**Enhanced control over a changing and increasingly complex world.**

**Anticipation of future events and outcomes.**

**General tools for solving hard problems.**

# Why Machine Intelligence?

**Enhanced control over a changing and increasingly complex world.**

**Anticipation of future events and outcomes.**

**General tools for solving hard problems.**

*Controlling complex systems and extracting knowledge from massive amounts of data.*

**Examples: finance, healthcare, energy, resources, transport, information processing.**

**BLINC Lab / SMART Network**  
August 2016

# Why Machine Learning?

Things are Unknown:  
**known ends but unclear means.**

Things are Complex:  
scaling up is demanding or impossible.

Things Change:  
systems need to adapt!

# Why Machine Learning?

Things Change:  
**systems need to adapt!**

# AI and ML in Medicine

1. **Helping to understand patient populations (generalization);**
2. **Helping to understand individual patients (personalization);**
3. **Helping choose and improve interventions (optimization):**
  - by connecting patients to assistive devices;**
  - by helping deploy treatment strategies.**

# Looking Forward: Complex Bodies, Multidisciplinary Care

**If a patient's body and mind are comprised of both biology and technology, how do we best treat the whole patient?**

**patients may (do) consider their technology part of themselves;**

**biology and technology may not be easily separable;**

**biological and technical care may not be easily separable;**

**normal care may soon involve experts in *tissue, muscles, nerves, and bones*, alongside experts in *hardware, software, and data science*.**

**And in case you were wondering what the robots are up to these days...**
