The Promise and Perils of AI: Part I Introduction to Machine Intelligence

Patrick M. Pilarski, Ph.D.

Reinforcement Learning & Artificial Intelligence Laboratory Alberta Innovates Centre for Machine Learning

Learning Objectives

- Be able to define and discuss machine intelligence.
- Be able to state why machine intelligence is important to society.
- Understand what machines might learn (representation, prediction, and control learning.)
- Understand how machines can learn about their world. (three learning approaches.)
- Understand when machines might learn. (online/real-time vs offline learning.)

Cheat-sheet: P.M. Pilarski, *Alberta ICT Magazine*, 2nd Ed., pp. 31 http://www.ualberta.ca/~pilarski/docs/papers/Pilarski-Learning-AlbertaICTMagazine2012.pdf

KEY IDEA

Data is now ubiquitous; it flows between connected systems at high volume and with great diversity.

Why Machine Intelligence?

- Enhanced control over a changing and increasingly complex world.
- Anticipation of future events and outcomes.
- General tools for solving hard problems.
- "Optimizing the control of complex systems and extracting knowledge from massive amounts of data."
- Examples: finance, healthcare, energy, resources, transport, information processing.

Alternate Identities

- Artificial Intelligence: does it need to learn?
- Machine Learning: is it truly intelligent?

 Pattern Recognition and Analysis: are they more than just deterministic processes?

Intelligent Systems: One Possible Definition

A system that can:

Perceive and Represent its world.

Predict its world.

Control its world.

- "The Pursuance of future ends and the choice of means for their attainment, are thus the mark and criterion of the presence of mentality in a phenomenon" (James, 1890)
- Purposeful: to have, seek & achieve goals (Sutton, 2001).

KEY IDEA

Intelligence revolves around maintaining and using knowledge (representation, prediction, control) in a purposeful way.

Why Learning?

- Things are Unknown: known ends but unclear means.
- Things are Complex: scaling up is demanding or impossible.
- Things Change: systems need to adapt!

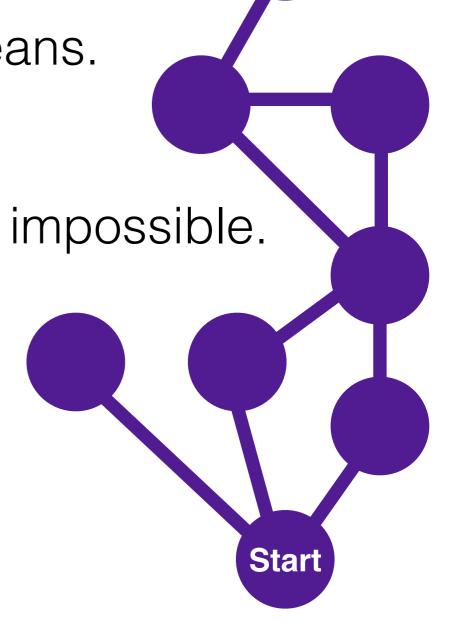

Why Learning?

 Things are Unknown: known ends but unclear means.

 Things are Complex: scaling up is demanding or impossible.

 Things Change: systems need to adapt!

End

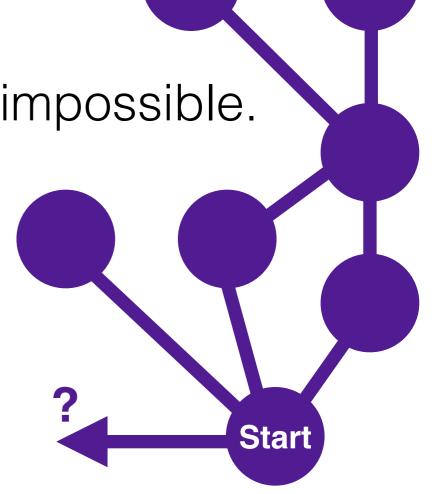

Why Learning?

 Things are Unknown: known ends but unclear means.

• Things are Complex: scaling up is demanding or impossible.

 Things Change: systems need to adapt!

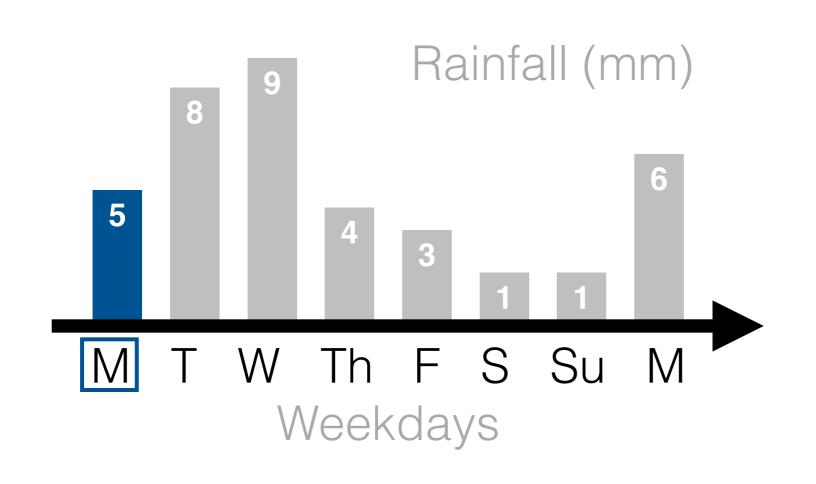

KEY IDEA

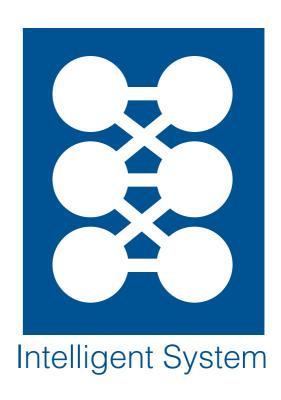

Our ability to directly engineer an intelligent system no longer scales up to our goals or to the complexity of the digital world.

What to Learn

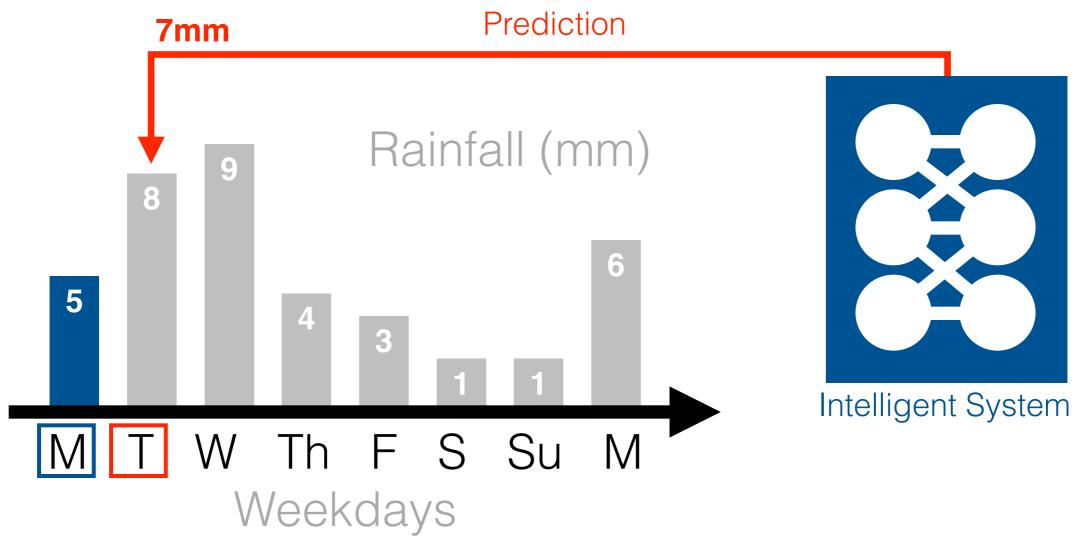

- Prediction Learning: building up knowledge.
- Control Learning: using knowledge to act.
- Representation Learning: structuring knowledge.

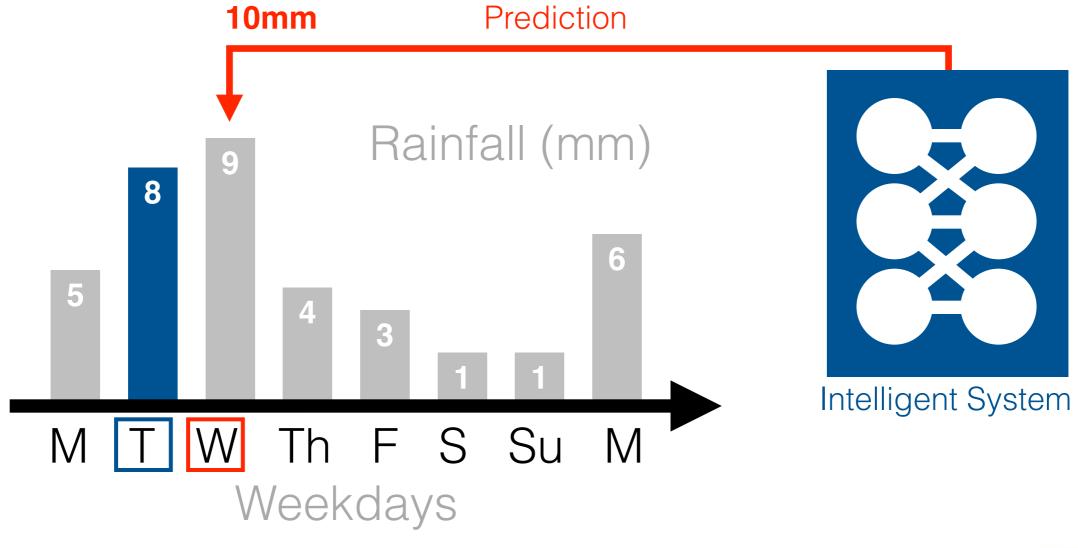

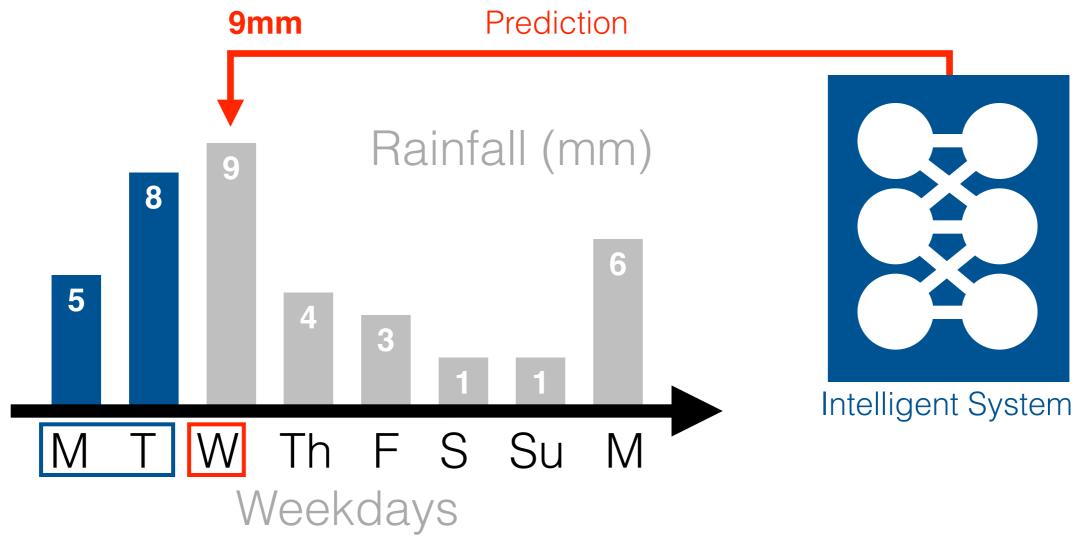

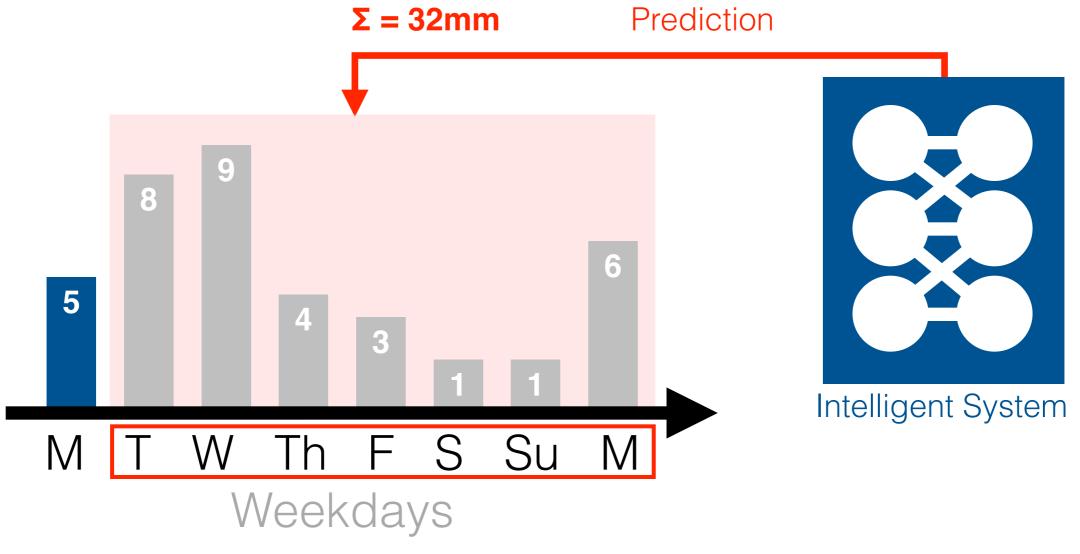

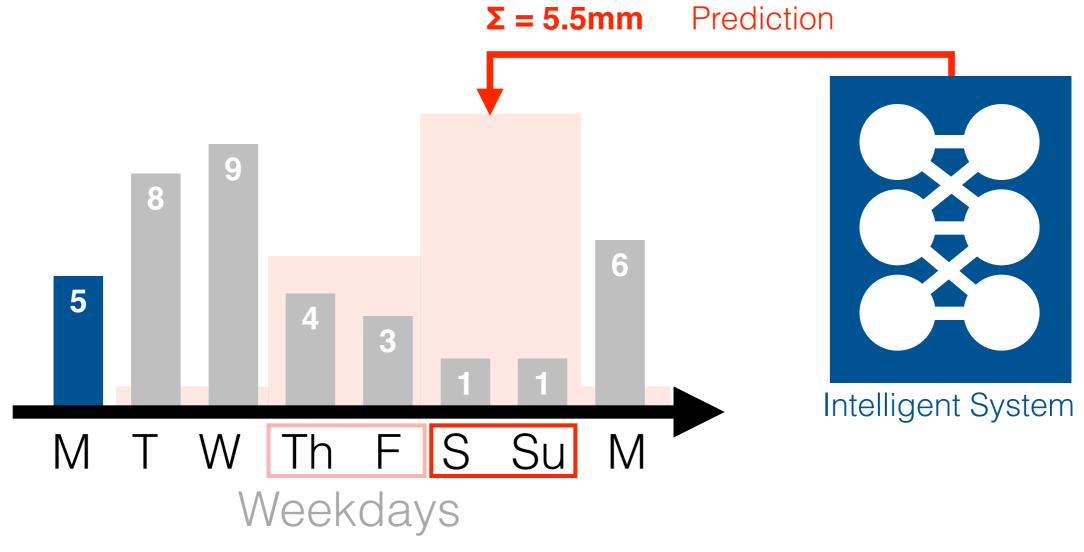

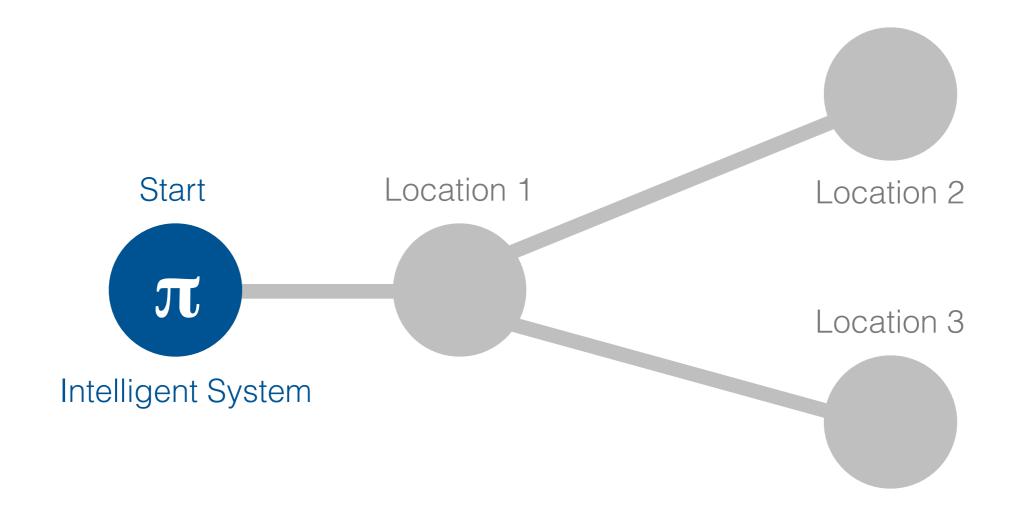

Temporally extended prediction.

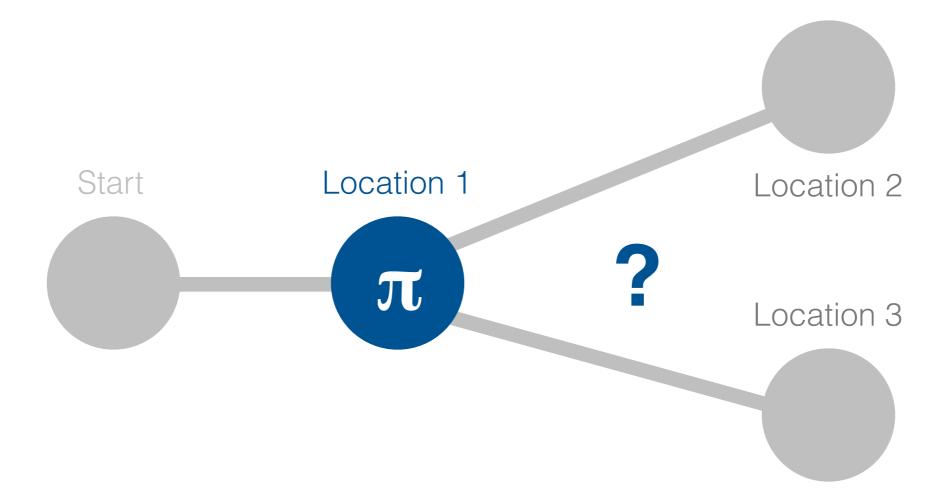

Temporally extended prediction.

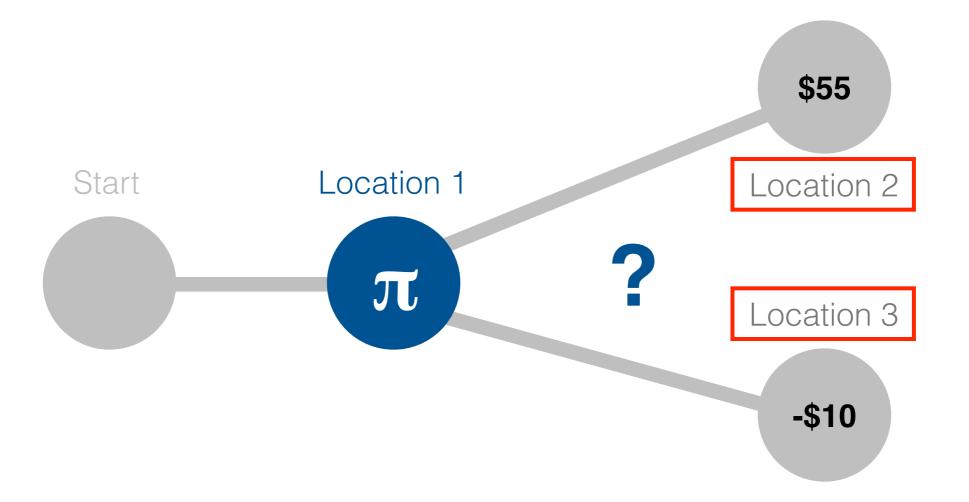

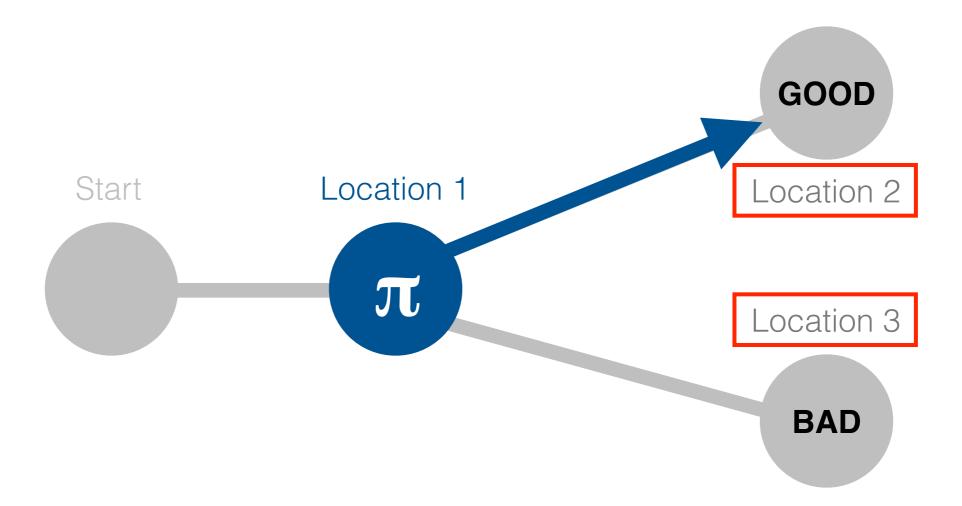

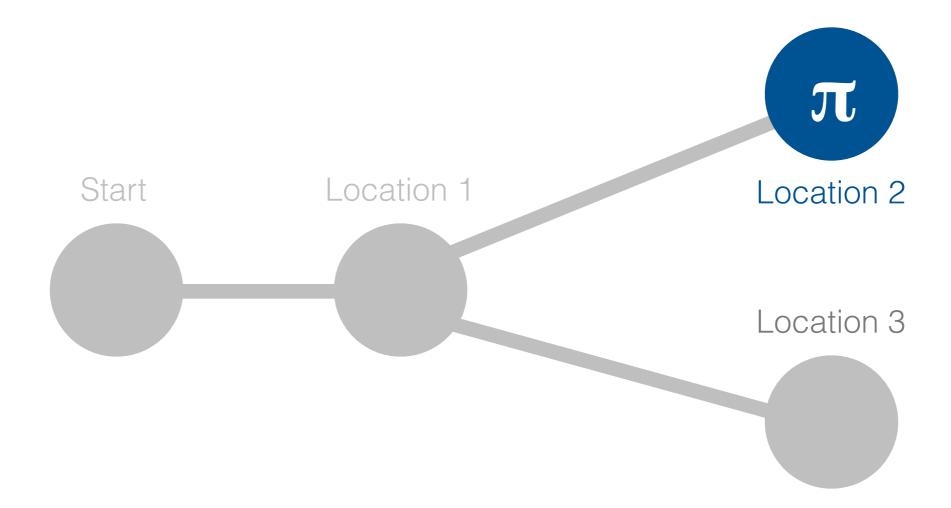

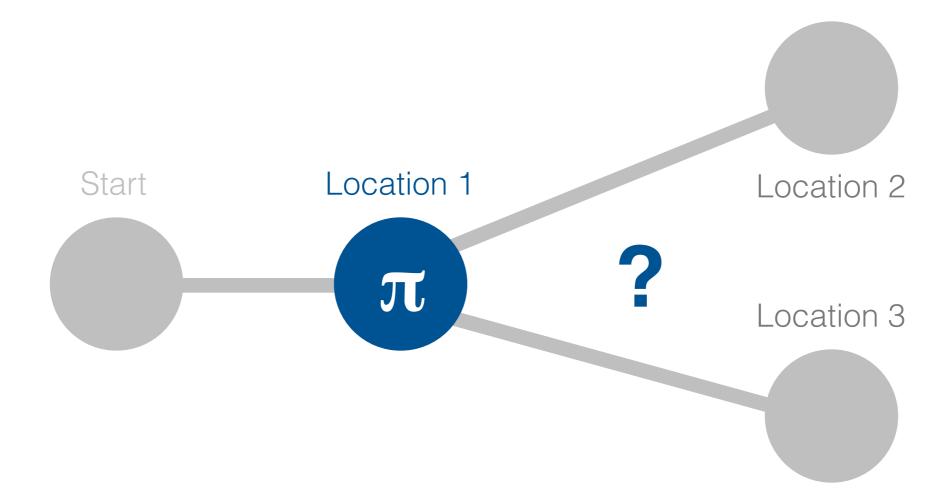

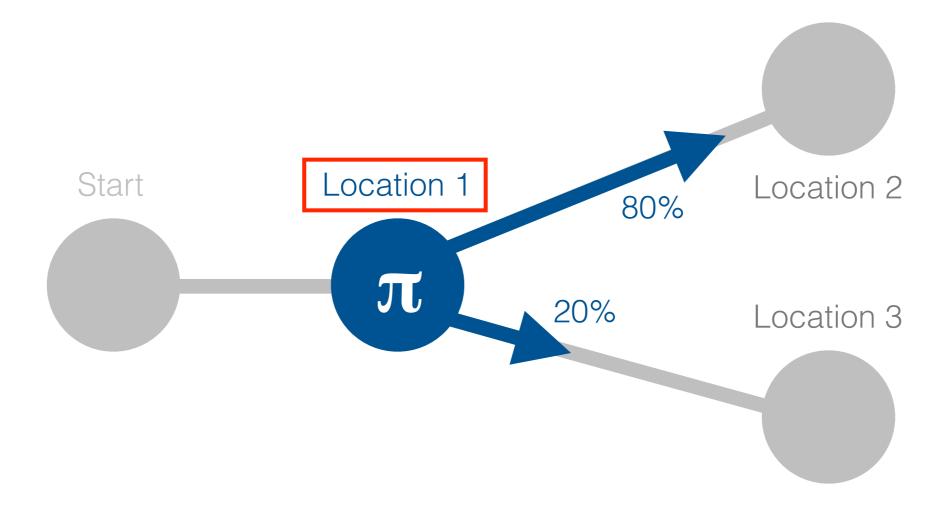

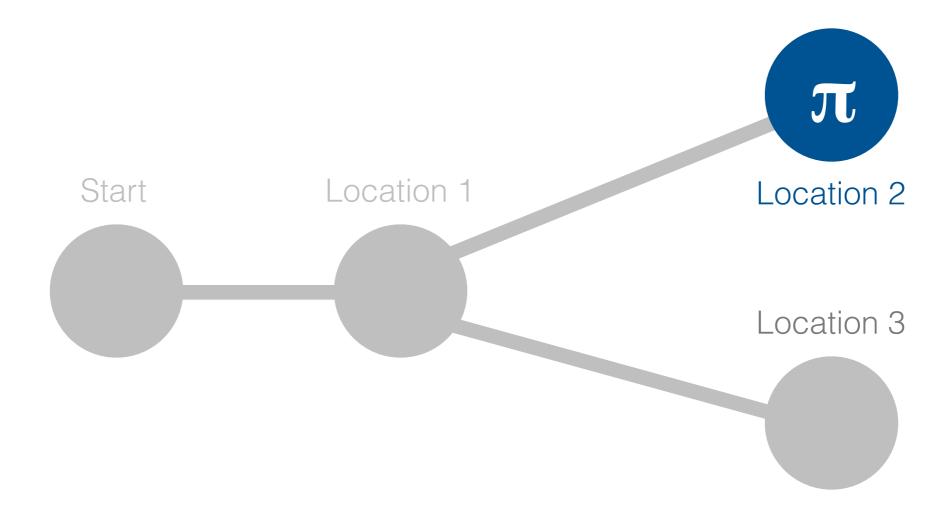

Altering and improving a policy.

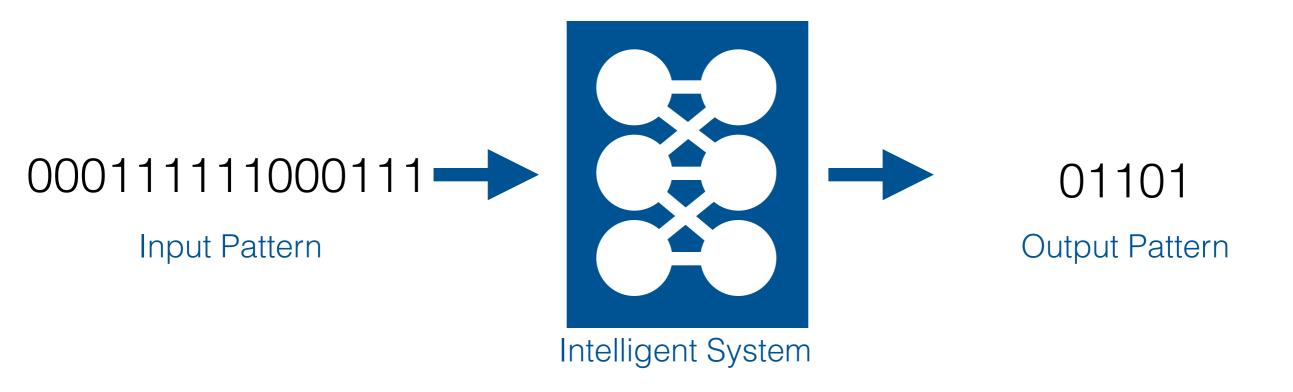

Altering and improving a policy.

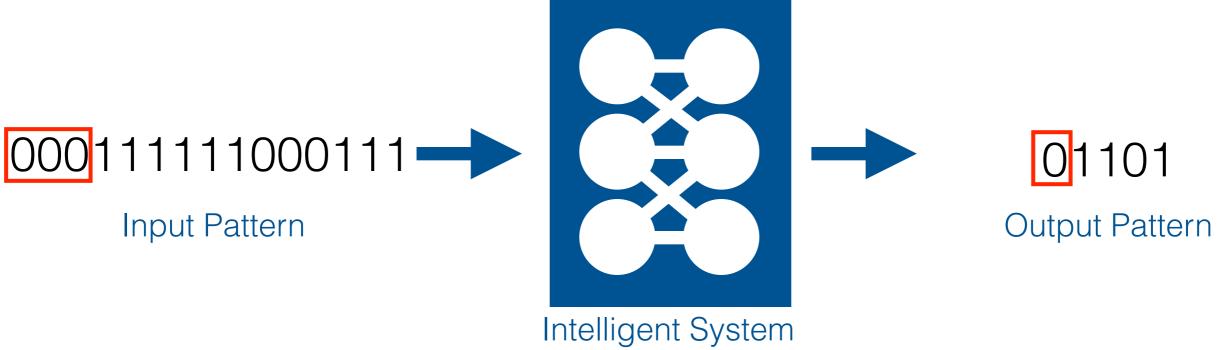

Altering and improving a policy.

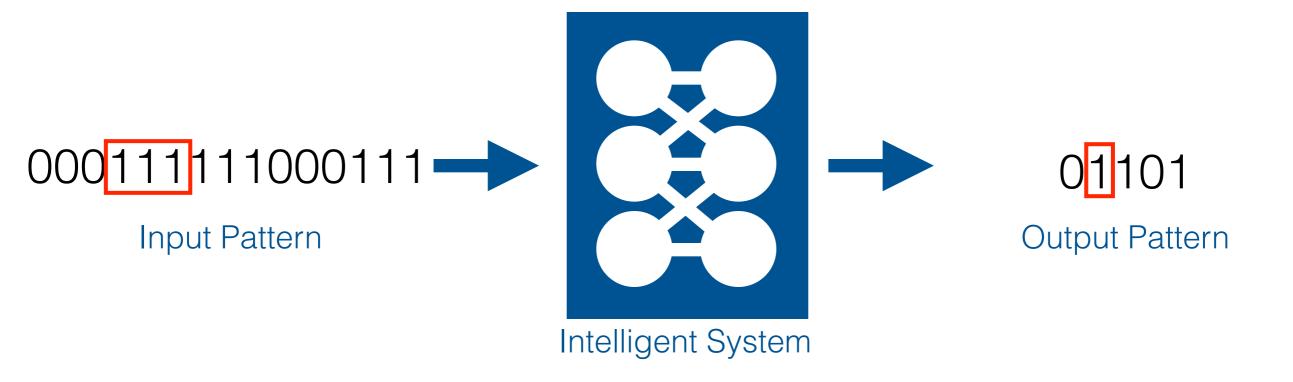

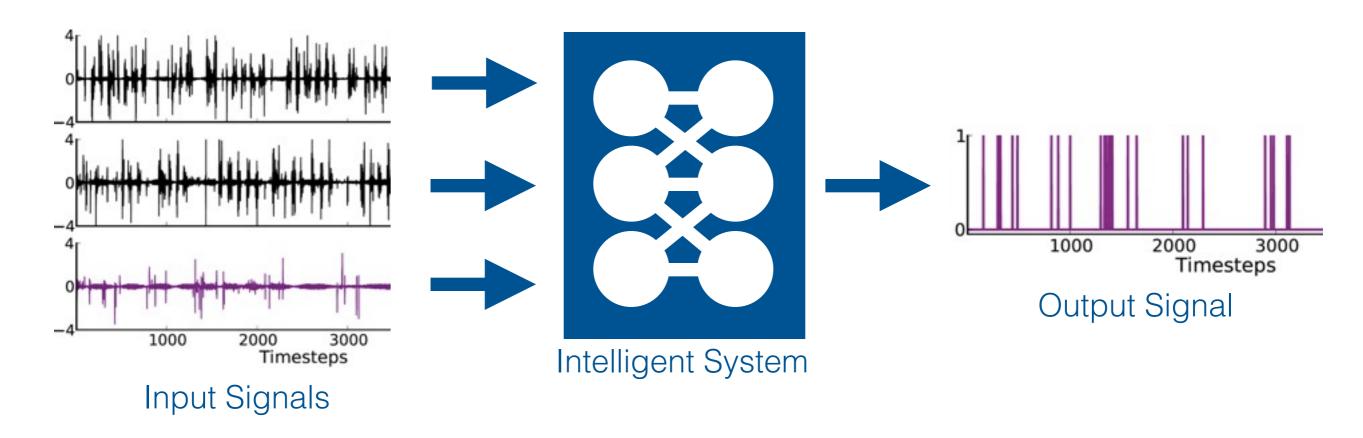

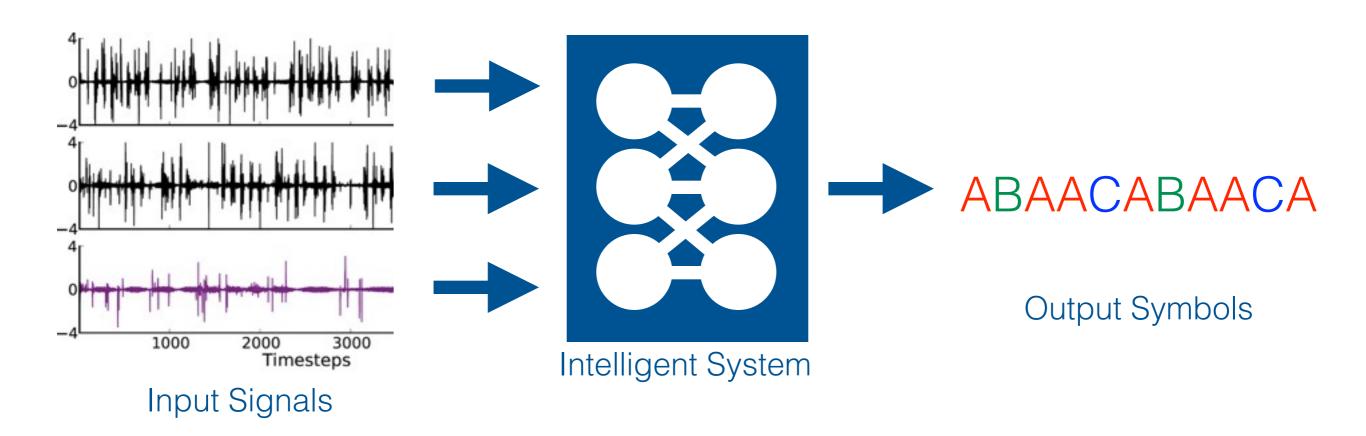

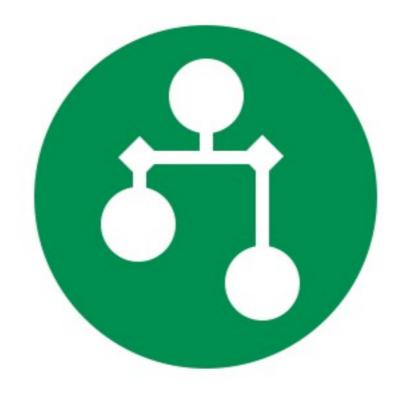

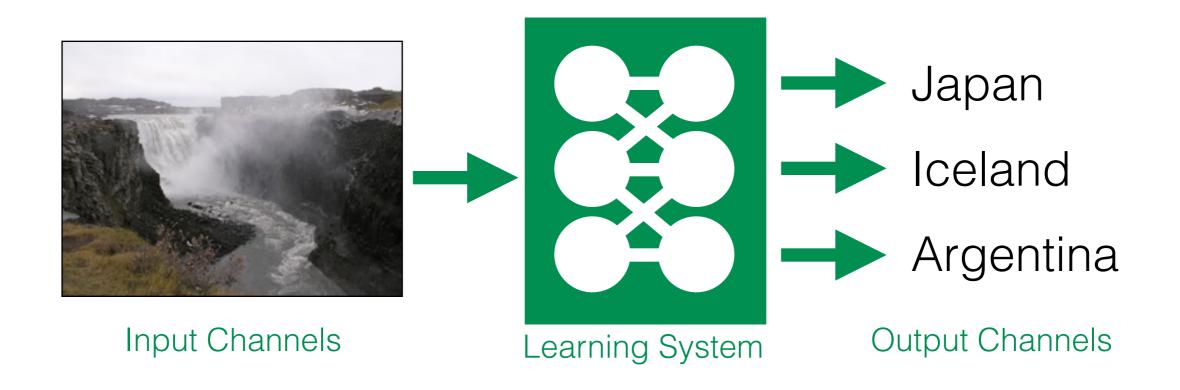

How to Learn

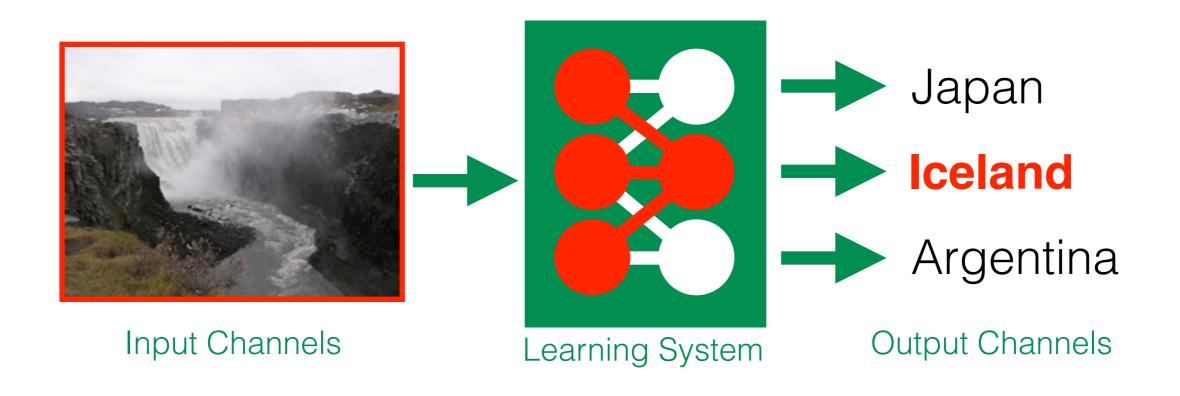

- From labeled examples: e.g., prediction learning.
- Finding structure in the data: e.g., representation learning.
- Through trial and error: e.g., control learning.

From Labeled Examples

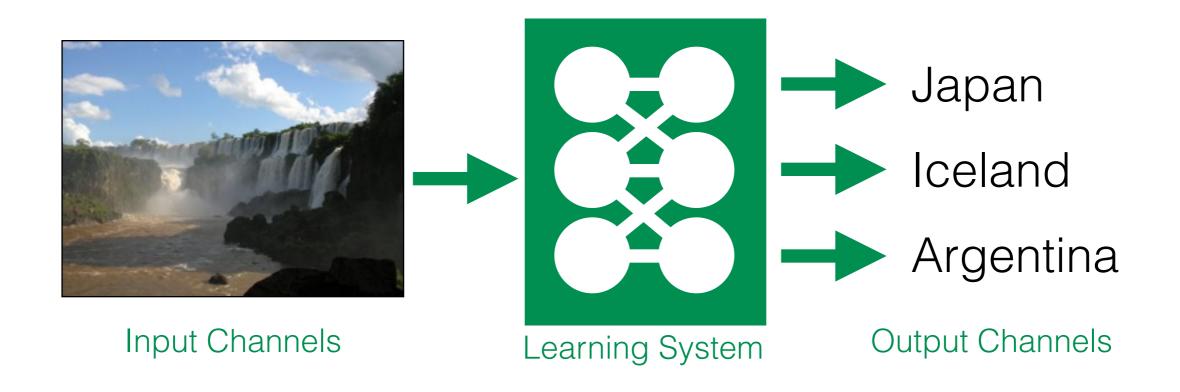

Prediction Learning.

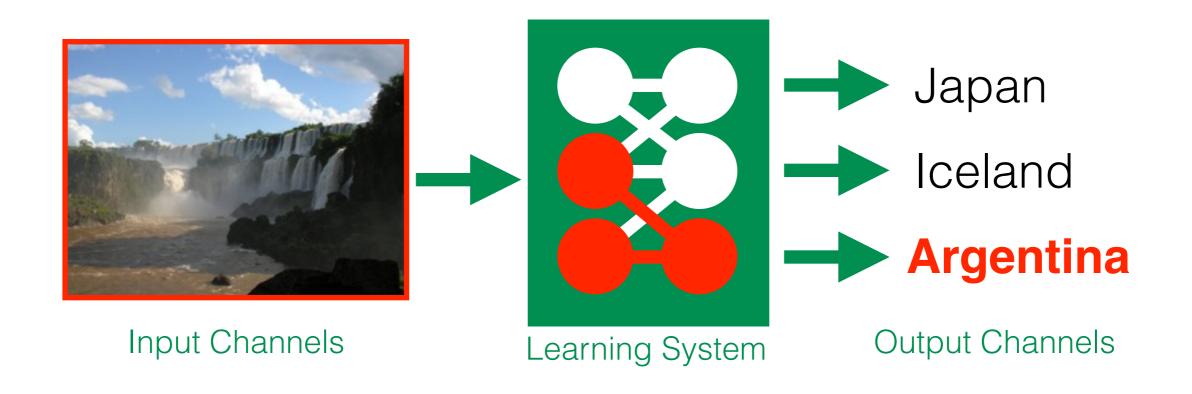

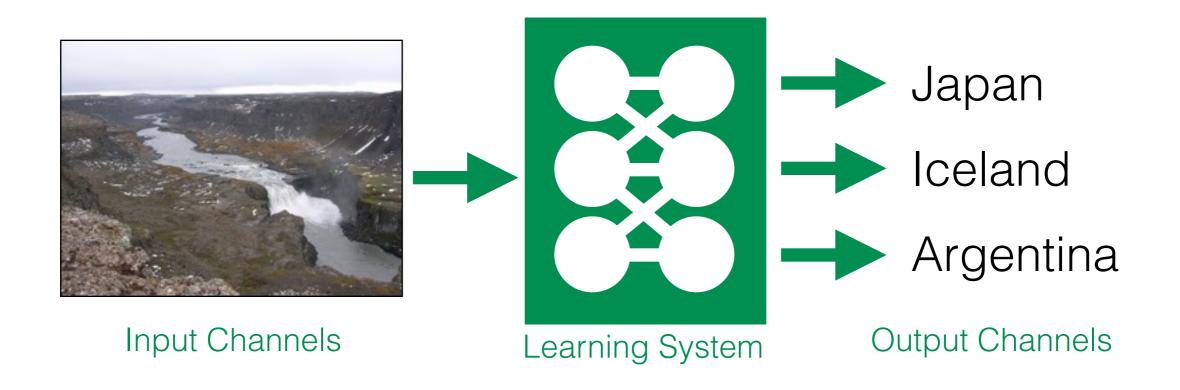

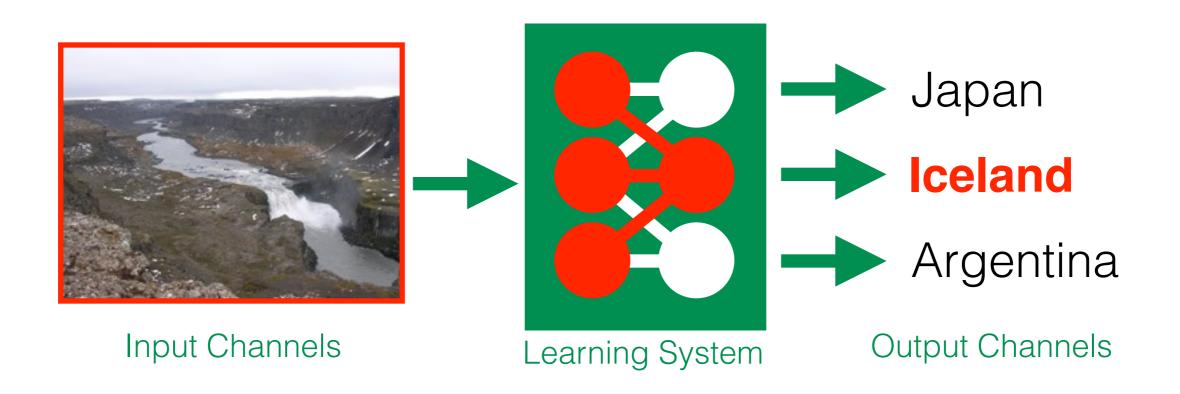

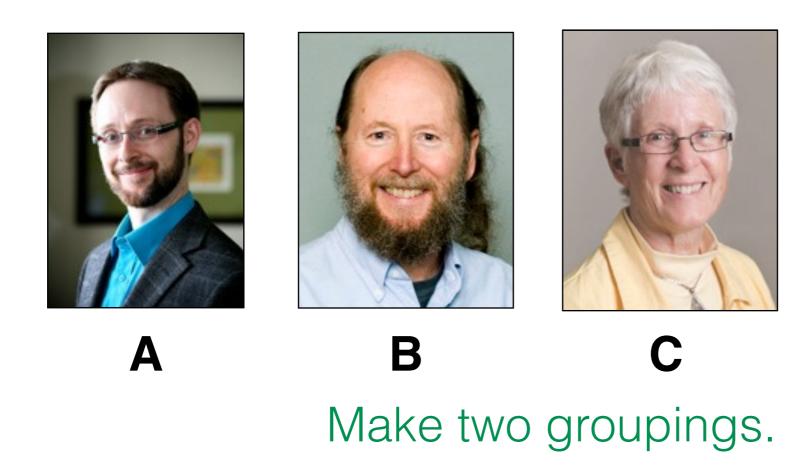

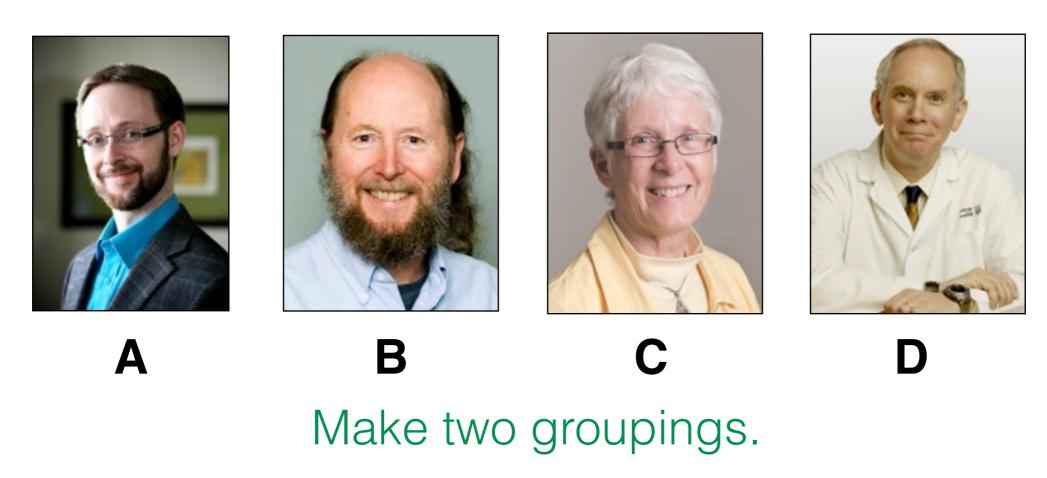

B

Make two groupings.

Extrinsic Motivation

Computational Curiosity.

Intrinsic Motivation?

Computational Curiosity.

Intrinsic Motivation?

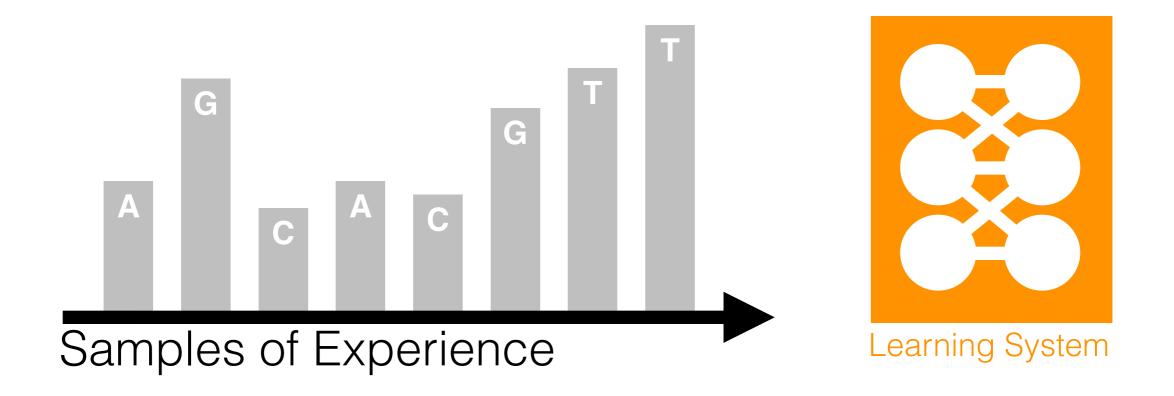

Computational Curiosity.

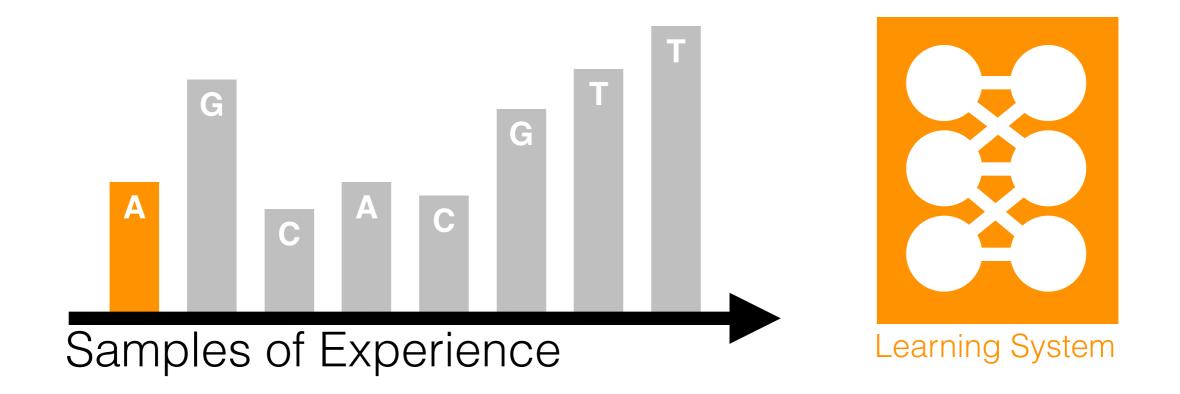

When to Learn

- In real time: online learning.
- From past experience: offline or batch learning.

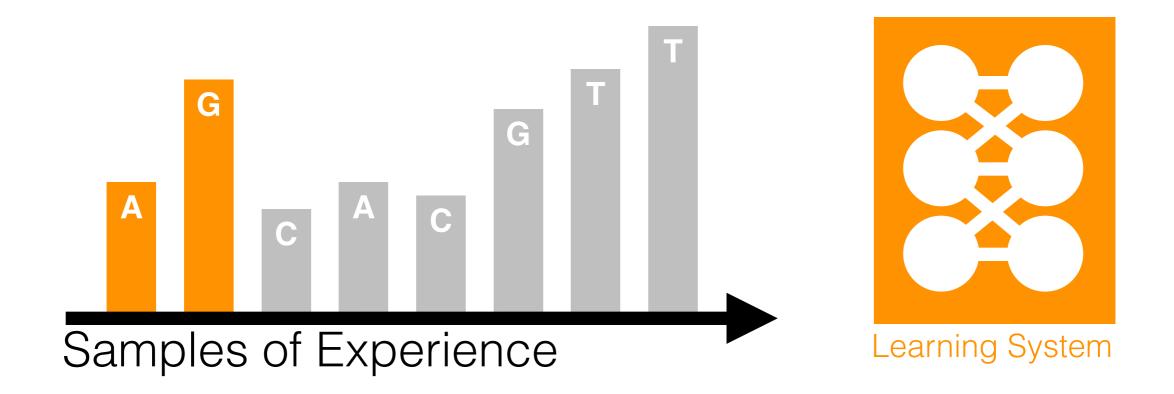

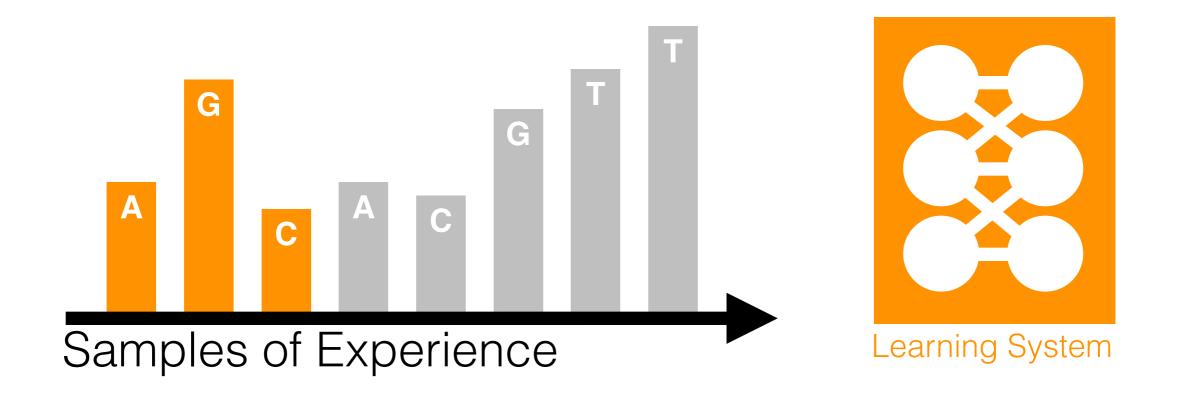

Acquire samples.

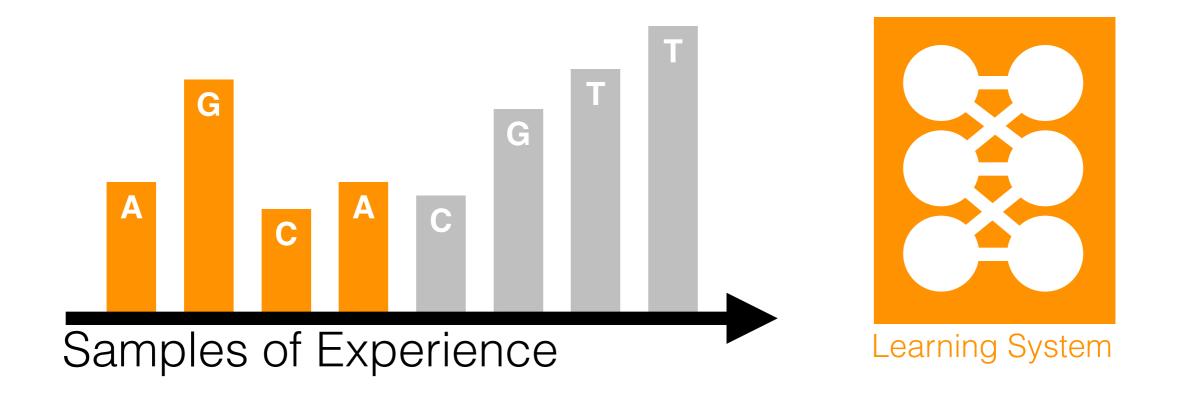

Acquire samples.

Acquire samples.

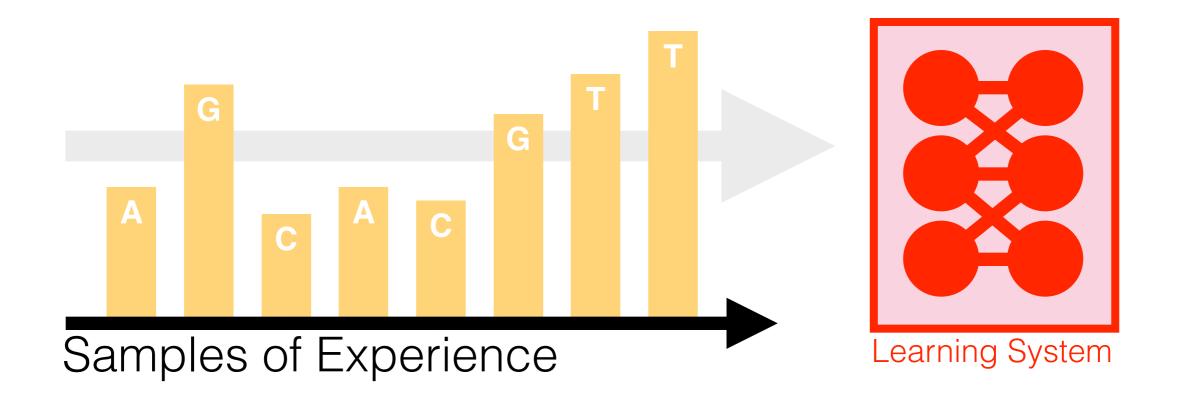

Acquire samples.

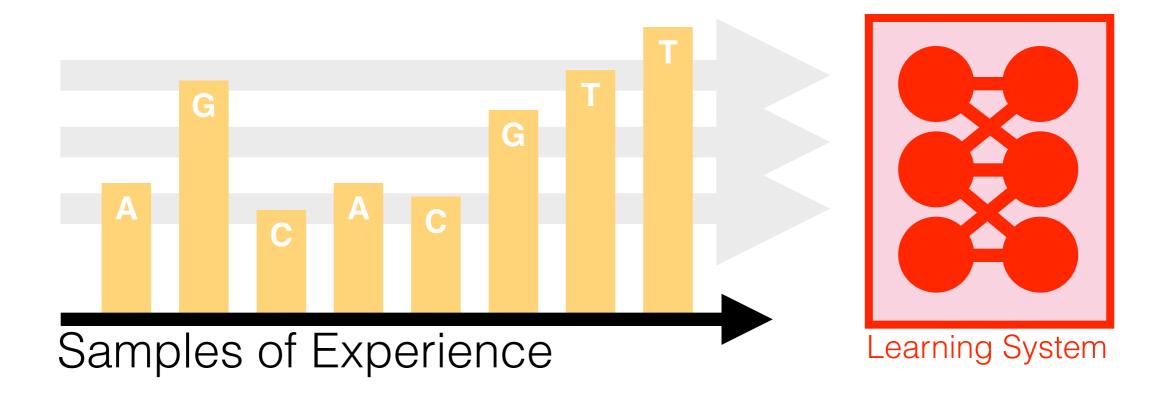

Acquire samples.

Update the learning system.

... often more than once.

Predictions

Rew Experience

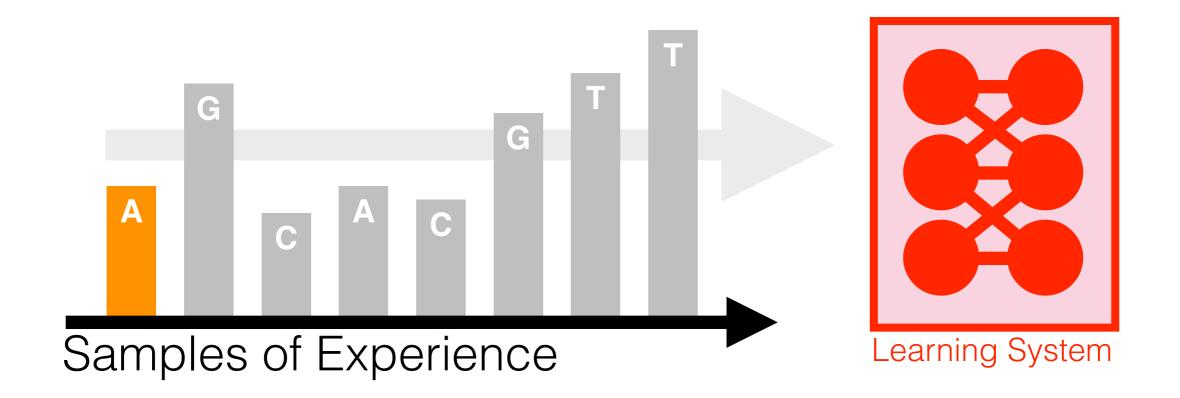

Learning System

Make predictions.

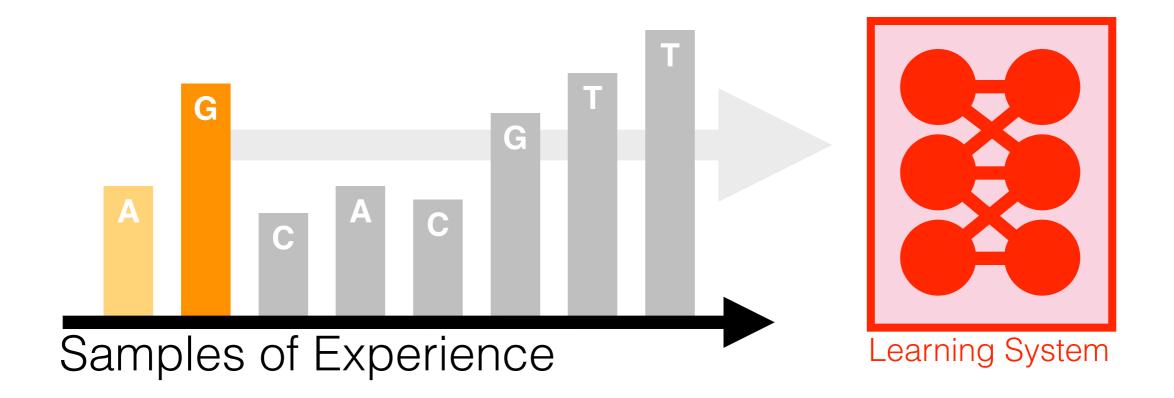

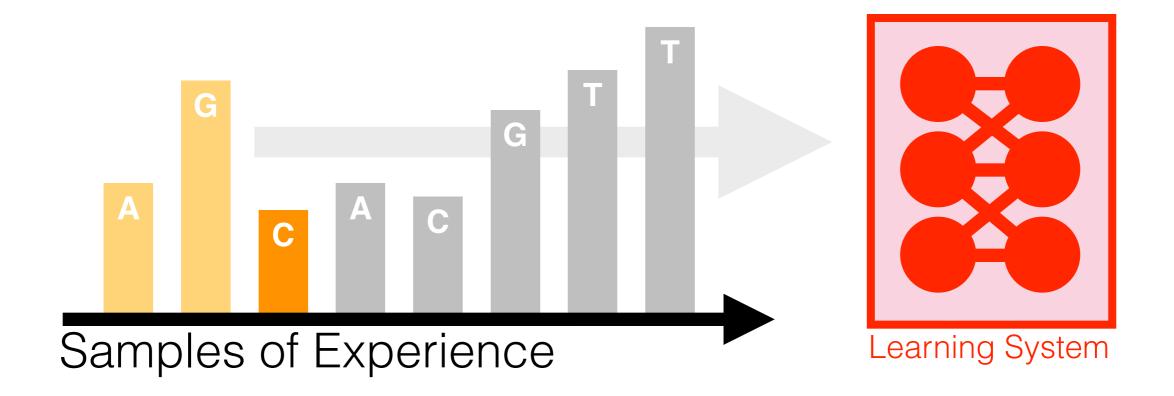

Acquire and update.

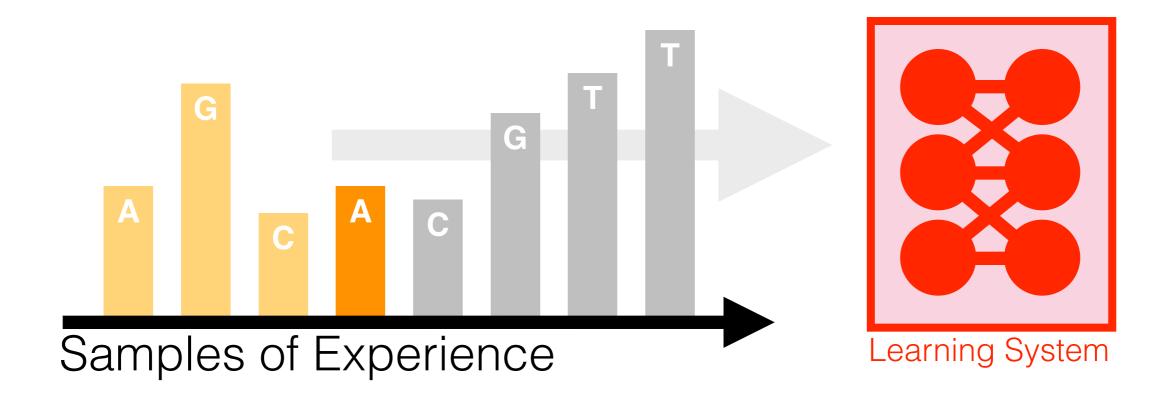

Acquire and update.

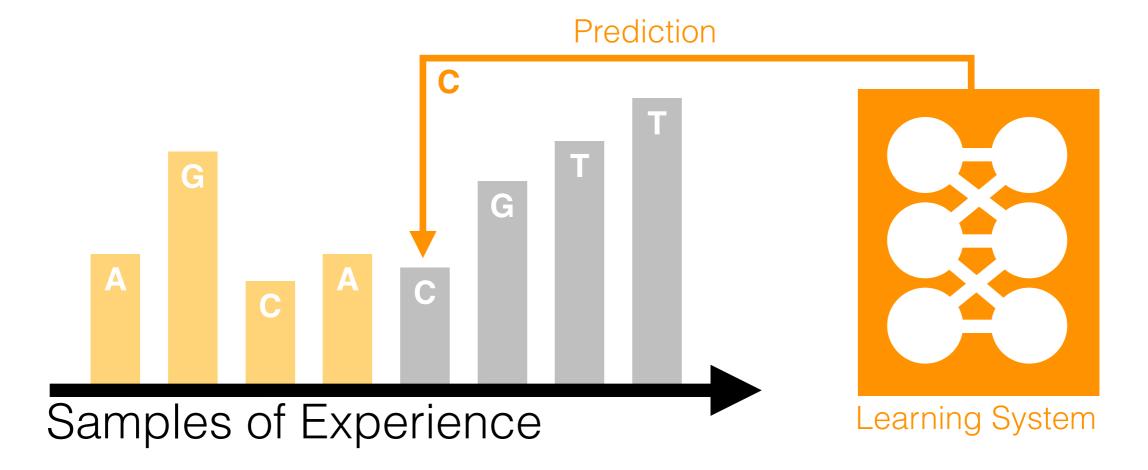

Acquire and update.

Acquire and update.

... while making predictions.

KEY IDEA

Many possible (compatible and interchangeable) ways for a machine to approach the acquisition and utilization of knowledge.

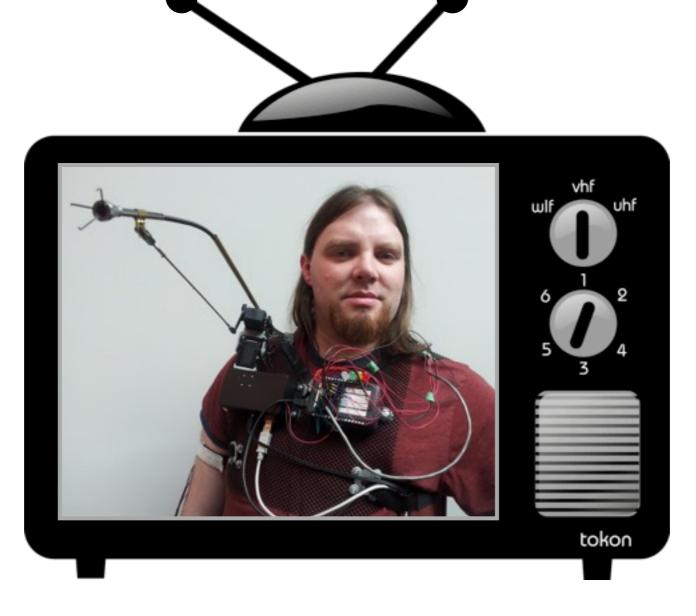

Learning Summary

- Be able to define and discuss machine intelligence, and be able to state why machine intelligence is important to society.
- Understand what machines might learn (representation, prediction, and control learning.)
- Understand how machines can learn about their world. (three learning approaches.)
- Understand when machines might learn.
 (online/real-time vs offline learning.)
- Imagine the promise and perils of intelligent machines.
