LE FRANCOPASS

Using Gamification to Immerse French Learners in the Francophone Community

4. Enter the code: FPpOstEr

Introduction

Le Francopass Web App (FP)

FP is a networked French community app (Marissa Snihur, Ashley Herman) to encourage participation in Students’ Union-led events.
FP relies on a network of French community partners (e.g., Alliance française of Edmonton, FRAP, EVAC, and others) who use the app to advertise their events and contribute with donations.

FP can positively contribute to the teaching and learning of French language and culture. Its success depends greatly on the involvement of instructors and community partners. FP can increase users’ perceived competence in French. FP can improve users’ perception of the French community. FP relies on a network of French community partners (e.g., Alliance française of Edmonton, FRAP, EVAC, and others) who use the app to advertise their events and contribute with donations.

Future Developments

A new funded research project in collaboration with a local school board is under way to investigate the benefits of FP as a tool of professional development for French immersion and FSL teachers.

courses throughout Edmonton, and beyond (Rao et al., 2021)

Background

Language learners are often reluctant to practice their second language outside the classroom for a variety of reasons (e.g., they are not comfortable enough, lack information, etc.),

With 86,705 Francophones, Alberta is one of the fastest-growing French-speaking communities in Canada. Edmonton offers a wide range of French-speaking activities throughout the year.

Instructors acknowledged the benefits of FP and recommended that the app be part of the regular classroom.

Ample research has demonstrated that practicing a language in authentic and immersive settings has countless benefits.

To encourage students to practice French outside the classroom, the Department of Modern Languages & Cultural Studies (MLCS) and Campus Saint Jean (CJ) launched in 2012 a first version of Le Francopass as a downloadable pdf social passport. However, there were limitations with the paper format.

FP is based on the 50 years application developed by Computing Science students to encourage participation in Students’ Union-led events.

FP is now technically viable and has almost 450 users to date.

For the FP to reach its full potential, all stakeholders will have to play their part.

Results

The results are those of the small-scale test as the large-scale test had to be cancelled due to the COVID-19.

Students who attended French immersion programs and Francophone were less engaged with FP than French learners.

Most students reported that:
- attending events increased their motivation to learn French;
- their perception of the French community had increased;
- their knowledge of francophone culture had improved;
- responded positively to the gamification component;
- indicated that they would recommend FP to their peers (Ashley et al., p. 246-27).

Some research hypotheses

1. FP can increase users’ motivation to learn about French language and culture.
2. FP can improve users’ perception of the French community.
3. FP can increase users’ perceived competence in French.
4. Gamification features (e.g., the leaderboard) makes FP appealing to users.

Methods

The research was divided into a small-scale (September-December 2019) and a large-scale (January 2020) test.

The small-scale test included a limited number of students from the Department of MLCS and CJ (Education), and allowed us to fix technical issues.

The large-scale test was open to any UofA students with an interest for French language and culture.

Some research hypotheses

- The research was divided into a small-scale (September-December 2019) and a large-scale (January 2020) test.
- Users can earn: ○ Collect ○ Win ○ Inter the code: "Affiche FP" in the Events list;
- As an improvement to the paper version, a beta version of FP was developed in the summer of 2019 using Django high-level Python Web framework. New features have been added over time (e.g., bilingual interface).
- FP relies on a network of French community partners (e.g., Alliance française of Edmonton, FRAP, EVAC, and others) who use the app to advertise their events and contribute with donations.
- FP can increase users’ perceived competence in French.

Scenarios: a) The small-scale test included a limited number of students from the Department of MLCS and CJ (Education), and allowed us to fix technical issues.

b) The large-scale test was open to any UofA students with an interest for French language and culture.

Participants included UofA students and instructors (mostly from MLCS and CJ)

Acknowledgments

We would like to thank Marissa Snihur and Ashley Herman for their invaluable contribution as well as our dedicated research assistants Bashair Alibrahim, Marie Syenry, and Amber Peters.
