### ACT TO IMPROVE

**Plan Do study Act Cycle #1: Sept 10, 2018 to Sept 10, 2019**

**1. Initial testing/screening provided after initial contact with the LKD coordinators**

**2. One day hospital screening with both Nephrologist and Surgeon appointment**

### MANAGE CHANGE

- A QI team was developed which included a nephrologist, the LKD coordinators and a QI consultant supported by various operational leaders
- 1:1 meetings with salient stakeholders required to be part of the hospital assessment day where consulted in the design and approach
- Patient centered approach for timely assessment also includes a reflective journal process for patients and a end of hospital day formal survey to ensure this hospital day supports patients needs.
