

Family Medicine Residency

LYNNWOOD FAMILY PHYSICIANS

Overview

Located in West Edmonton and close to the Misericordia Community Hospital, the clinic has a wide variety of patients in all age ranges, from largely urban and suburban areas. Previously the Meadowlark Family Practice clinic, we have recently relocated into brand new space in Lynnwood. The clinical patient population is approximately 7,000. Areas of service outside of the clinic include nursing home, homecare, house calls as well as palliative care. Our MDs are privileged to offer inpatient hospital care to patients at the Misericordia Hospital, which provide a unique avenue to offer true continuity of care throughout patients' illness experiences.

The Clinic has an enterprise electronic medical records system (Connect Care) and offers residents an opportunity to learn the business of medical practice first hand. Our clinic frequently serves as a pilot site for new initiatives. We remain on the cutting edge of EMR development and implementation within the medical home model as it evolves and matures.

Lynnwood is in a modern family practice clinic designed with teaching in mind. Each resident gets their own workspace. There are 3 exam rooms per teaching physician to allow for better patient flow and give the resident the opportunity to take appropriate time with patients. This allows for development of clinical acumen while exposing residents to varied patient volumes as experience dictates.

Learning Opportunities

Lynnwood offers residents a complete and immersive experience in community-based, full-scope family practice. There are weekly teaching seminars. Experience the satisfaction and joy of making a living practicing what you love.

Preceptors

All preceptors are involved with research as participants, co-leads, co-investigators, and where noted have hospital privileges and are attending physicians for their in-hospital patients.

Dr. Fraser Armstrong Community Preceptor, Clinical Professor	Interests: medical home, continuity of care, acute care inpatient hospital medicine, office-based surgery, nursing home care, palliative care, obesity treatment, EMR system administration and design, resident/medical student teaching
