## MESSAGE FROM THE DEPARTMENT CHAIR

---

This year's annual report reflects a tremendous amount of scholarly output by a diverse group of researchers. The numbers of papers, presentations, and other products are impressive, as are the journals and venues in which they appear. Cause for pride indeed, but what is most impressive is what is not captured in these lists: impact. The Department's researchers and scholars have not merely produced a lot of work, nor even just a lot of interesting and original work, but work that has made a difference. It's one of the greatest privileges of my position as Chair, that I find myself in meetings and working with leaders provincially, nationally, and internationally, and see the work done by our researchers and scholars quoted, held up as examples, and used to change patient care and policy. These lists of papers, presentations, posters, QI projects, etc., aren't just tallies. Each one is a little piece of making health care in Canada better.

***Dr. Lee Green, Professor and Chair***  
*Department of Family Medicine*  
*Faculty of Medicine and Dentistry*

### MISSION:

To promote, support, create and disseminate research knowledge and scholarly activity in the discipline of family medicine, increase research capacity in the Department of Family Medicine, and enhance the research skills of faculty members, residents and students.

### VALUES:

- Excellence and quality in research and scholarly activity;
- Interdisciplinary collaboration on research projects;
- Highest ethical standards in the conduct of research projects; and the diversity of generalist family practice and the research questions that arise.

## INTRODUCTION BY THE RESEARCH DIRECTOR

---

Family medicine is comprehensive discipline. In order to address the comprehensive needs of our patients and communities, we work with multidisciplinary teams. Our research mirrors our discipline. As you read through this year's annual report you will be impressed with the breadth of our research. You will see more than just clinical research projects. You will also see projects that engage communities, health services research, educational research, evidence-based medicine, quality improvement

research, care of the elderly research, implementation science and translational health research to name a few. You will also observe many multidisciplinary team research projects that engage key stakeholders of researchers, decision makers, communities, and patients. Our research activity supports the quadruple aim, that is, our overall research program aims to improve 1) patient outcomes, 2) patient experience, 3) lower costs, and/or finally 4) improve clinician experience.

In summary, our research is comprehensive, multidisciplinary and engages key stakeholders. Our research supports the quadruple aim and we complete the circle of knowledge, from discovery to application.

Enjoy the read
