A suspected septic transfusion reaction associated with vancomycin-resistant Enterococcus faecium linked to metabolic syndrome.

Gasoline-derived methyl tert-butyl ether as a potential obesogen linked to metabolic syndrome.

Clinical Validation of a Myeloid Next-Generation Sequencing Panel for Single-Nucleotide Variants, Insertions/Deletions, and Fusion Genes

Insertions/Deletions, and Fusion Genes Sequencing Panel for Single-Nucleotide Variants, Insertions/Deletions, and Fusion Genes

Predicting the prognosis of ER-positive breast cancer through sublethal apoptosis and predicts poor prognosis of ER-positive breast cancer.

Analytical validation of a standardised scoring system for digital pathology and machine learning for digital pathology.

Digital gene expression analysis might aid in the diagnosis of thyrodis cancer.

Sources of viral respiratory infections in Canadian adults hospitalized with influenza in the 2016-17 and 2017-18 epidemics in Canada.

Analytical validation of a standardised scoring system for digital pathology and machine learning for digital pathology.

Clinical validation of a Myeloid Next-Generation Sequencing Panel for Single-Nucleotide Variants, Insertions/Deletions, and Fusion Genes

A prospective comparative study of children with gastrointestinal emergency department compared with symptomatic care at home.

First author

A suspected explicit transfusion reaction associated with posttransfusion contamination of a platelet pool by vancomycin-resistant Enterococcus faecium.

Contributing author

Development of an ordinal scale treatment endpoint for digital pathology.

Extensive increase in respiratory disease in adults hospitalized with acute respiratory infections in Canadian acute care hospital personnel.

The association between influenza vaccination and socioeconomic status in high income countries varies across time periods.

Using population-wide administrative and laboratory data to estimate type- and subtype-specific influenza vaccine effectiveness: a surveillance protocol.

Results of the CANWARD 2011-16 study identified accurately symptoms of Prognostic and Theranostic Biomarkers Contributions in Cancer Diagnostics and Development

Species distribution and anthrofugal susceptibility of invasive Candida isolates from Canadian hospitals: results of the CANHARDS 2011-16 study.

HIV-associated severe diarrhea and underlying risk factors: a multicentre collaboration.
