1. Graduate Program Manual Introduction

The graduate student manual is our governing document to assist student and supervisors understand graduate studies program and policies within the Neuroscience and Mental Health Institute (NMHI). The manual includes information on program and academic requirements, thesis proposal and examination guidelines. These guidelines encompass, and in some cases, supersede the equivalent regulations in the Faculty of Graduate Studies and Research (FGSR) Calendar to which students are referred to for further information.

In addition to the guidelines, students in the NMHI are governed by the University of Alberta policies including the most updated version of those listed below:

- [University of Alberta Calendar](#)
- [University of Alberta - Faculty of Graduate Studies and Research (FGSR) Graduate Manual](#)
- [University of Alberta - Code of Student Behaviour](#)
- [University of Alberta - Discrimination, Harassment and Duty to Accommodate Policy](#)

Responsible for achieving a work, study, and living environment free of harassment and discrimination rests with every individual to whom this Policy applies. All members can reasonably expect to pursue their work and studies in a safe and respectful environment. Neither the University nor any associated individual shall practice or condone any discriminatory or harassing conduct that adversely affects the pursuit of work and study or life on campus. Individuals who are aware of acts of discrimination or harassment are encouraged to take appropriate steps to stop the discriminatory or harassing behaviour. Advice and assistance may be sought from anyone in a position of authority, such as a supervisor, instructor or administrator. More formal advice and assistance may be sought from the Office of Safe Disclosure and Human Rights (OSDHR), Office of the Student Ombuds (OSO), the Association of Academic Staff University of Alberta (AASUA), the Non-Academic Staff Association (NASA), Human Resource Services (HRS) and Organizational Health and Effectiveness (OHE), the Office of the Dean of Students and Student Accessibility Services (SAS).
2. Introduction to the Neuroscience and Mental Health Institute

The Neuroscience and Mental Health Institute (NMHI) at the University of Alberta is multi-faculty, interdisciplinary teaching and research Translational Science Institute. The NMHI offers a graduate program that is designed for students who desire a broad training in various experimental and theoretical aspects of neuroscience while maintaining a research program that may be more specialized. This can be achieved by drawing on the expertise of our members from various departments, faculties and colleges at the University of Alberta who have research interests in neuroscience.

The following manual outlines the regulations governing graduate studies in the NMHI at the University of Alberta. Our guidelines encompass as well as outline regulations noted in the Graduate Program Manual from the Faculty of Graduate Studies and Research (FGSR). Students and supervisors are encouraged to also refer to the University Calendar for further information.

The Neuroscience Graduate Student Association (NGSA) is the graduate student group within the NMHI. If you are interested in joining the NGSA, elections are typically held in June. Please feel free to reach out to neurosci.gsa@gmail.com. Watch for exciting events arranged by the NGSA such as the NMHI Research Day, Brain Awareness Week and public lectures.

NMHI Graduate Program Contacts

Associate Director of Education:
Dr. Elena Posse de Chaves, elena.chaves@ualberta.ca

Graduate Coordinator:
Dr. Kelvin Jones neurogrd@ualberta.ca

Student Program Administrator:
Amber Lapointe, nmhi@ualberta.ca
3. Program Requirements for MSc Students

Requirements to complete the graduate program include: courses, ethics, seminar attendance, NMHI Research Day attendance, annual meetings with your supervisory committee and graduate coordinator, a thesis proposal, final defense and submission of a thesis.

Course Requirements MSc Students

A total of 6 credits and a thesis are required for the MSc degree. The only exception to course requirements for the MSc degree would be for clinical trainees such as medical residents, who, (in consultation with and approval of the graduate coordinator), may be exempt. Students are expected to have completed undergraduate courses such as PMCOL 371 and PHYSL 372 or their equivalent. Students deficient in this area may require this as a condition to their admission.

Effective September 2014, MSc students have the option, in consultation with their program supervisor, to complete a lab rotation course, typically during the first year. Students can choose either NEURO 500 (two terms; 6 credits) or NEURO 501 (one term; 3 credits). NEURO 500 involves rotations through three laboratories during the first year. Each rotation involves two months of research experience (six months in total). One rotation may be in the laboratory of the primary supervisor. Although this course is 6 credits, an additional lecture-based, graduate-level course will be required to meet the course requirements if students register in NEURO 500. NEURO 501 involves rotation through one laboratory taken outside of the laboratory of the primary supervisor. Students, in consultation with their supervisory committees, may also select courses in other areas important to their research programs. Effective September 2014 (for new students only), MSc students, therefore, must complete NEURO 500 or 501 and one lecture-based course, or two lecture-based courses, from the Neuroscience approved course list.

NMHI graduate students may take a graduate level reading course for 3 credits to fulfill their course requirements. However, the following limitations apply:

1. The course must be taken with a Faculty member other than the student’s supervisor(s).
2. The course can be from any department, but it must be approved by the NMHI graduate coordinator.
3. Students cannot meet their graduate student quota of 6 (MSc) credits merely based on a combination of lab rotation and reading courses (i.e., some didactic, lecture-based course work is required.

Students are required to maintain a minimum cumulative program grade point average of 3.3 (B+) throughout their program.
4. **Program Requirements for PhD Students**

Requirements to complete the graduate program include: courses, ethics, seminar attendance, NMHI Research Day attendance, annual meetings with your supervisory committee and graduate coordinator, a thesis proposal, candidacy exam (for PhD students), final defense and submission of a thesis.

**Course Requirements for PhD students**

PhD students must complete 9 credits, a candidacy exam, and a thesis. An important feature of the PhD program is the requirement that students participate in a lab rotation course, typically during the first year. Students must choose either NEURO 500 (two terms; 6 credits) or NEURO 501 (one term; 3 credits). NEURO 500 involves rotations through three laboratories. Each rotation involves two months of research experience (six months in total). One rotation may be in the laboratory of the primary supervisor. NEURO 501 involves rotation through one laboratory taken outside of the laboratory of the primary supervisor. Effective September 2014 (for new students only), PhD students, therefore, must complete either NEURO 500 and one lecture-based course, or NEURO 501 and two lecture-based courses, from the Neuroscience approved course list.

NMHI graduate students may take a graduate level reading course for 3 credits to fulfill their course requirements. However, the following limitations apply:

1. The course must be taken with a Faculty member other than the student’s supervisor(s).
2. The course can be from any department, but it must be approved by the NMHI graduate coordinator.
3. Students cannot meet their graduate student quota 9 (PhD) credits merely based on a combination of lab rotation and reading courses (i.e., some didactic, lecture-based course work is required)

Students are required to maintain a minimum cumulative program grade point average of 3.3 (B+) throughout their program.
5. Academic Requirements

Ethics

The academic integrity and ethics training requirement stipulates that all graduate students must complete eight hours of structured academic activity in academic integrity and ethics prior to convocation.

NMHI graduate students are required to complete the following ethics and program requirements:

Beginning in Fall 2022, the new Ethics and Academic Citizenship Requirement will replace the current Academic Integrity and Ethics Training Requirement. The Ethics and Academic Citizenship Requirement will consist of two zero-credit, self-paced, online courses: INT D 710: Ethics and Academic Citizenship (required for both master’s and doctoral students) and INT D 720: Advanced Ethics and Academic Citizenship (required for doctoral students). These courses are designed to better support students by tailoring the content for master’s and doctoral students. The courses cover principles of academic citizenship, including topics such as academic integrity; research and workplace ethics; Indigenizing and decolonizing the academy; equity, diversity, and inclusivity; wellness and academic productivity; and, ethical principles in university teaching. To learn more about these courses and to view the course outlines, please visit the FGSR website. Students are required to take one of these courses in the first year of their graduate studies.

Professional Development

Students are required to fulfill the Professional Development requirement which has two components and must be completed as specified by FGSR.

1) Students must submit a completed IDP plan within 12 months of start of the Master’s program; within 18 months of direct entrance into a PhD program.

2) Students must complete eight hours of professional development activities inspired by the career plan. This “must be completed within the first three years for doctoral students and time to completion for Master’s students”.

Progress and fulfilment of the PD hours (eight) is the students’ responsibility but will be monitored in the Annual Report.

Seminar Attendance

In addition to the required courses, students are required to attend regularly scheduled weekly seminars offered in the Neuroscience Seminar Program. All graduate students are required to attend 20 seminars per year anywhere on campus and at 10 of the seminars must be selected from the list of formal Neuroscience seminars hosted by the NMHI. We also host a number of seminars where students will be required to attend in addition to the mandatory minimum of 10 weekly seminars per year.

Students must track their individual seminar attendance and include this report in their yearly report which is sent out in June. Participation in these seminars is a requisite for continuation in the program.
6. NMHI Events & Outreach

NMHI Research Day
One day each year is designated as Neuroscience and Mental Health Institute Research Day (NRD) which highlights graduate student research within the institute and facilitates interdisciplinary interactions among students and faculty. Students display their research by preparing posters and/or presentations followed by a keynote presentation from a distinguished scientist from outside of the University of Alberta. It is mandatory each student attends NRD as participation is a requisite for continuation on the NMHI graduate program.

Brain Awareness Week
Brain Awareness Week (BAW) is the global campaign held every March to increase public awareness of the progress and benefits of brain research. NRD is generally held on the Friday before BAW events begin.

Run for Brain Research
The run for brain research also known as the Neuroscience, Education, Research and Development (NERD) Run is an annual event hosted by the NMHI to increase support and awareness of neuroscience research.

The Synaptic Post
The Synaptic post is an NMHI weekly newsletter created to keep students, NMHI members and the greater University community up to date on our events and research accomplishments. Please ensure that you are receiving the newsletter as this is the tool to keep you best informed on the upcoming events, seminar series and other opportunities.

The Faculty of Graduate Studies and Research
FGSR sends out a newsletter to keep all graduate students up to date with any news and events. Watch for opportunities to complete your Individual Development Plan (IDP) hours, new and upcoming awards as well as campus activities.
7. **Supervisory Committee Composition (MSc and PhD)**

Committees will be formed in accordance with FGSR regulations. Supervisory committees for all Students (both MSc and PhD) must be appointed by six months into the student’s first year in the program and a supervisory committee meeting must be held within the first 6 months of the student’s first year.

The Committee will consist of the supervisor and at least 2 other full-time faculty members (at least 1 of whom is a NMHI member). All supervisors must be members of the NMHI with active research programs. New investigators, members who hold an MD degree (with no thesis), or members who have not graduated a student will normally be required to appoint a co-supervisor for their students. The co-supervisor must first be approved by the graduate coordinator.

The supervisor/student will suggest names of potential committee members to the graduate Coordinator for approval, names will be forwarded to the Faculty of Graduate Studies and Research (FGSR) for the final approval.

**Program Outline**

1. Meet with the student at least once a year to determine the student's progress and to advise on academic and research matters. A Report of Supervisory Committee Meeting form must be submitted to the NMHI office after each supervisory committee meeting.

2. Take part in examinations required by the FGSR (e.g., Candidacy Examinations, Final Oral Examinations).

3. The Supervisor has specific responsibilities:
   a. Ensures that the student meets all the administrative requirements of the NMHI and FGSR. Note that, in accordance with FGSR regulations, it is the supervisor's responsibility and not the student's to arrange supervisory committee meetings and examinations.
   b. Provides the research support necessary for completion of the thesis research.
   c. Makes every possible effort to secure financial support for the student.
   d. Provides the NMHI graduate committee with an annual written report on the student's performance as requested. This will be requested in June with the student annual report.
8. MSc Thesis Proposal and Evaluation

By the end of the first year of the MSc the student will submit a thesis proposal document, which will be evaluated by the supervisory committee, and the student will be required to defend his/her proposal orally to that committee in response to questions. Exceptions to this time frame may be granted by the graduate coordinator.

Examination Committee Composition
- The chair, appointed by the NMHI from among the members of the graduate committee
- The student’s supervisory committee

Please note that committee membership must be approved in advance by the Graduate Coordinator.

Purpose of the Examination
The purpose of the examination is to determine the student’s ability to formulate a hypothesis based on existing evidence, and to design an experimental test of that hypothesis. The student must demonstrate a knowledge of the literature relevant to the problem to be addressed and must show an appreciation of good experimental design and the technical difficulties and pitfalls inherent in the chosen methodology.

Role of the Examination Committee
The examination committee will review the student’s performance in formal course work, the student’s competence as revealed by the thesis proposal itself and the student’s ability to defend the content of the proposal. Committee members will assess the feasibility of the project within the projected timeline and determine whether the project is of sufficient quality and quantity for the degree proposed. Following this review, a determination will be made on the student’s future status within the program and recommend any further courses deemed necessary to attain an acceptable level of knowledge. Committee members are encouraged to provide feedback to improve the quality of the research project and identify potential obstacles or pitfalls.

Thesis Proposal Document
At least one week prior to the date of the evaluation, the student will provide each member of the supervisory committee and the chair with a copy of the thesis proposal. The documents must include a brief introduction to the research topic, a summary of the student’s work done to date and an outline of the research plan, including methodology and anticipated timelines for completion. Typically, the thesis proposal document should be between 10-20 double-spaced pages (not including figures or references).

Preparing for the Examination
At least three weeks in advance of the exam, the supervisor will provide the NMHI administrator with the date, time, and place of the exam. The administrator will then appoint the chair and notify the committee and the student.

Format of the Examination
1. In the presence of the student, the chair will summarize the student’s performance in course work to date.
2. The student will give a short (no longer than 20 minutes) presentation summarizing the thesis proposal.
3. The student will defend the proposal in response to questions from each committee member in turn. Questions may include more general areas of relevant neuroscience so that the committee may be satisfied that the student has an appreciation of the subject adequate to pursue the proposed research.

4. Discussion among the committee members concerning the outcome of the evaluation is carried out in the absence of the student.

5. Following the conclusion of the exam, a Report of Supervisory Committee form must be completed, signed, and returned to the NMHI office.

6. If an MSc Student intends to transfer into the PhD program and successfully completes a PhD Thesis Proposal, a Recommendation for Change of Category form must be completed and submitted to the NMHI.

Possible Outcomes of the Examination

- Proceed unconditionally - Excellent performance with no or minor areas of weakness that do not require remedial action. Allows for continuation in the MSc Program, or, if appropriate, transfer to the PhD Program.

- Proceed conditionally - Adequate performance with areas of weakness identified. Committee recommends remedial action. Allows for continuation in the MSc Program, or, if appropriate, transfer to the PhD Program.

- Repeat evaluation - Only given if the committee feels that there are extenuating circumstances or if the performance is much poorer in one or more areas than anticipated from the student’s record.

- Transfer to PhD Program – In addition to any conditions set, the student is granted permission to transfer to the PhD program.

- Withdraw - The student is asked to withdraw from the program. The student may choose to remain in the program for the remainder of the academic year. Students who fail will not be considered for readmission to the program.

PhD Thesis Proposal and Evaluation

Between 12-18 months into the program, the student will submit a thesis proposal document, which will be evaluated by the supervisory committee, and the student will be required to defend his/her proposal orally to that committee in response to questions. Exceptions to this time frame may be granted by the graduate coordinator.

Examination Committee Composition

- The chair, appointed by the NMHI from among the members of the graduate committee

- The student’s supervisory committee

- Please note that committee membership must be approved in advance by the Graduate Coordinator.
Purpose of the Examination
The purpose of the examination is to determine the student’s ability to formulate a hypothesis based on existing evidence, and to design an experimental test of that hypothesis. The student must demonstrate a knowledge of the literature relevant to the problem to be addressed and must show an appreciation of good experimental design and the technical difficulties and pitfalls inherent in the chosen methodology.

Role of the Examination Committee
The examination committee will review the student’s performance in formal course work, the student’s competence as revealed by the thesis proposal itself and the student’s ability to defend the content of the proposal. Committee members will assess the feasibility of the project within the projected timeline and determine whether the project is of sufficient quality and quantity for the degree proposed. Following this review, a determination will be made on the student’s future status within the program and recommend any further courses deemed necessary to attain an acceptable level of knowledge. Committee members are encouraged to provide feedback to improve the quality of the research project and identify potential obstacles or pitfalls.

Thesis Proposal Document
At least one week prior to the date of the evaluation, the student will provide each member of the supervisory committee and the chair with a copy of the thesis proposal. The documents must include a brief introduction to the research topic, a summary of the student’s work done to date and an outline of the research plan, including methodology and anticipated timelines for completion. Typically, the thesis proposal document should be between 10-20 double-spaced pages (not including figures or references).

Preparing for the Examination
At least three weeks in advance of the exam, the supervisor will provide the NMHI administrator with the date, time, and place of the exam. The administrator will then appoint the chair and notify the committee and the student.

Format of the Examination
At the evaluation:

1. In the presence of the student, the chair will summarize the student’s performance in course work to date.
2. The student will give a short (no longer than 20 minutes) presentation summarizing the thesis proposal.
3. The student will defend the proposal in response to questions from each committee member in turn. Questions may include more general areas of relevant neuroscience so that the committee may be satisfied that the student has an appreciation of the subject adequate to pursue the proposed research.
4. Discussion among the committee members concerning the outcome of the evaluation is carried out in the absence of the student.
5. Following the conclusion of the exam, a Report of Supervisory Committee form must be completed, signed, and returned to the NMHI office.
Possible Outcomes of the Examination

- Proceed unconditionally - Excellent performance with no or minor areas of weakness that do not require remedial action. Allows for continuation in the PhD Program.
- Proceed conditionally - Adequate performance with areas of weakness identified. Committee recommends remedial action. Allows for continuation in the PhD Program.
- Repeat evaluation - Only given if the committee feels that there are extenuating circumstances or if the performance is much poorer in one or more areas than anticipated from the student's record.
- Withdraw - The student is asked to withdraw from the program. The student may choose to remain in the program for the remainder of the academic year.

Transfer from an MSc Program to the PhD Program

A transfer to the PhD program will be based on both the student’s performance in course work and demonstrated ability to conduct PhD level research. A comprehensive evaluation of the student’s progress will be carried out (normally at the end of the first year) and, after successful completion of a PhD thesis proposal committee meeting, the supervisory committee may recommend transfer to the PhD program. There are two options for MSc students to complete a PhD thesis proposal exam:

1. The student can prepare a PhD thesis proposal with prior approval of the supervisor and supervisory committee and not hold an MSc proposal.
2. The student can prepare a PhD thesis proposal following his/her MSc thesis proposal if it is decided following the MSc proposal that the student wishes to transfer to the PhD program.

PhD Candidacy Examination

Candidacy exams should be scheduled by the end of the 2nd year in the program and held in the 3rd year of the program at the latest. Candidacy exams should be scheduled by the end of the 3rd year in the program and held in the 4th year of the program at the latest.

This is a time when most, if not all, of the course work is completed and the thesis research is started or is well defined. The candidacy examination must be passed no less than 6 months prior to taking the final oral examination.

Examination Committee Composition

- The chair is a member of the NMHI graduate committee who is not the supervisor and is appointed by the NMHI administrator.
- The student’s supervisory committee
- The minimum size of a candidacy examination is five examiners. The maximum size is seven examiners
- Two arm’s length examiners. ‘An arm’s length examiner is knowledgeable in the field and comes fresh to the examination. They must not be (or have been) a member of the supervisory committee, or have been connected with the thesis research in a significant way. The examiner should not have been associated with the student, outside of usual contact in courses or other
non-thesis activities within the University, nor be related to the student or supervisor(s). 'The
arm’s length examiners should not be a former supervisor or student of the supervisor(s).’ The
supervisor, often in discussion with the student, selects and invites the two additional
examiners to be on the committee.

Purpose of the Examination
The purpose of the examination is for the student to demonstrate that he/she has a broad knowledge of
neuroscience and of the subject matter relevant to the thesis and has the ability to pursue and complete
original research at an advanced level. The questioning will not be directly related to the thesis research,
but rather questions will cover a broad scope which can include basic neuroscience concepts, broader
concepts in the student’s research area as well as theoretical and technical aspects of data collection and
analysis.

Role of the Examination Committee
During the examination the role of each examiner is to test the student's knowledge in specific topic areas
previously outlined (see below) and related areas.

Preparing for the Examination
1. The examination committee should be established well in advance of the examination. The
   student should then meet or be in contact with each examiner to discuss general content areas
   that they will base their questions on and establish appropriate sources for background reading
   material. The specifics regarding the reading sources provided by examiners will vary depending
   on each examiner; examiners may provide a very specific "reading list" or a more general "reading
   area".
2. At least five weeks in advance of the exam, the supervisor must provide the NMHI with the date,
   time, and place of the exam as well as the names of the two extra examiners. The administrator
   will then arrange for a chair and notify the supervisory committee and the student of the chair.
3. The chair is charged with ensuring that the exam is of a consistent standard. Students are
   expected to have good and general neuroscience knowledge. Effective September 1, 2013, the
   expectation of students will be that they could adequately explain all topics covered (including
   appendices) in Bear et al, Neuroscience: Exploring the Brain (either 2nd or 3rd edition).
4. The administrator will provide the supervisor with a completed FGSR ‘Notice of Examining
   Committee & Examination Date’ form which the supervisor must sign and return to the
   administrator.
5. The administrator will ensure that form is complete and submit the form to FGSR at least 3 weeks
   in advance of the exam.

Format of the Examination
The Student does not present the committee with a written report. The examination will begin with a
review of the student's progress including course work, awards, publications and presentations. The
student will then provide a 15-20 minute oral presentation outlining their thesis. Emphasis should be given
to describing the overall goals and hypotheses being tested. Key data can be presented to emphasize
progress of the thesis work and the presentation should conclude with an outline of future plans for
completion of the thesis. It should be noted that during the candidacy examination only minor attention
should be given to the thesis work.
Possible Outcomes of the Examination

One of the following outcomes of the candidacy is appropriate: Adjourned, Pass, Conditional Pass or Fail.
9. MSc Final Examination

Typically, the final oral exam for MSc students is scheduled at the end of the second year or approximately 1 year after the thesis proposal meeting. MSc students have 4 years from their first term of registration to complete all degree requirements.

Examination Committee Composition

- The chair is a member of the NMHI graduate committee who is not the supervisor and is appointed by the NMHI administrator.
- The student’s supervisory committee.
- The minimum size of a master’s final thesis examination is three examiners. The maximum size is five examiners.
- One arm’s length examiner. ‘An arm’s length examiner is knowledgeable in the field and comes fresh to the examination. They must not be (or have been) a member of the supervisory committee, or have been connected with the thesis research in a significant way. The examiner should not have been associated with the student, outside of usual contact in courses or other non-thesis activities within the University, nor be related to the student or supervisor(s). The arm’s length examiners should not be a former supervisor or student of the supervisor(s).’ The supervisor, often in discussion with the student, selects and invites the additional examiner to be on the committee.

Purpose of the Examination

The purpose of the MSc final examination is to assess the student’s knowledge of the literature relevant to their research area, understanding of the procedures used to collect and analyze their data, understanding of the significance of their research in the context of their research area, and knowledge of the limitations and pitfalls of their chosen methodology.

Role of the Examination Committee

The committee will review the thesis document and conduct an oral examination to test the student's knowledge of the thesis subject and of related fields. The final decision of the examination committee will be based both on the quality of the thesis document and on the student’s performance in defense of that document.

MSc Thesis Document

All regulations regarding the preparation of the thesis are governed by FGSR.
Preparing for the Examination

1. Students must submit a completed thesis to the supervisory committee with sufficient time so that each member can submit a form indicating their decision on its suitability for defence at least five weeks prior to the examination. The exam date cannot be set before members of the supervisory committee recommend, on the “Preliminary Acceptance of Thesis” form available on the NMHI website, that the thesis is acceptable for examination.

2. The exam must be set with FGSR three weeks prior to the date of the exam and a chair for the exam must be arranged, the Preliminary Acceptance of Thesis form(s) must be submitted by the student to the NMHI office at least five weeks before the date of the exam. The supervisory committee members can each sign a different form; all signatures do not have to be on the same form.

3. Once the NMHI administrator receives all of the signatures as supplied by the student, the Administrator will inform the supervisor. It is then the responsibility of the supervisor to arrange the date, time, and place of the exam at least 5 weeks prior to the exam.

4. Once the Administrator has been informed of the date, time, and place of the exam, the Administrator will arrange for the chair from among the members of the NMHI graduate committee. The Administrator will then inform the supervisor and student of the chair. It is then the student’s responsibility to provide a hard and/or electronic copy of the thesis to the chair.

5. Once the meeting has been set and the chair arranged, the Administrator will email the supervisor the FGSR form “Notice and Approval of a Master's Final Oral Examining Committee & Examination Date.” The supervisor must sign the form and submit to the NMHI.

6. The student must provide the NMHI Administrator with the exact name of the thesis as soon as it is known and at least a few days prior to the exam.

7. The Administrator will provide FGSR with the “Notice of Examining Committee & Examination Date” at least 3 weeks prior to the exam.

Format of the Examination

A formal public seminar is not required for an MSc degree but can be scheduled if the student and/or supervisor like to hold one prior to the exam. It would be attended by the supervisory committee and other interested individuals. If a seminar is scheduled, please ensure that the venue is appropriate and provide the NMHI office with a seminar title and abstract at least 2 weeks in advance so the seminar notice may be circulated. If the student does not present a public seminar the final examination will be preceded by a 30 minute presentation attended by the supervisory committee.

Possible Outcomes of the Examination

One of the following outcomes of Master’s Final Examination is appropriate: Adjourned, Pass, Pass subject to revisions or Fail.

Time Limit for Submission of Theses to FGSR

Following completion of the final oral examination at which the thesis is passed or passed subject to revisions, the Student shall make the appropriate revisions where necessary and submit the approved thesis to FGSR within 6 months of the date of the final oral examination. The Neuroscience and Mental Health Institute may impose earlier deadlines for submitting revisions.
If the thesis is not submitted to FGSR within the 6 month time limit, the student will be considered to have withdrawn from the program. After this time, the student must apply and be re-admitted to FGSR and register again before the thesis can be accepted.

If the final oral examination is adjourned, the 6 month time limit will take effect from the date of completion of the examination where the thesis was passed with or without revisions.

In order to convocate students must submit their thesis to the FGSR for approval before the deadline dates set out in the Academic Schedule of the Calendar. Students must also ensure that they are registered in the appropriate Thesis course in their last registration prior to convocation.
10. PhD Final Examination

The final exam for PhD Students is normally held at the end of the fourth year in the graduate program. PhD Students have a maximum of six years from their first term of registration to complete all degree requirements. Master's students who are transferred to a doctoral degree must complete all degree requirements within 6 years from their first term of registration as a Master's Student.

Examination Committee Composition

- The chair is a member of the NMHI graduate committee who is not the supervisor and is appointed by the NMHI administrator.
- The student’s supervisory committee
- The minimum size of a doctoral final examining committee is five examiners. The maximum size is seven examiners.
- An external examiner from outside of the University of Alberta
- Two arm’s length examiners. ‘An arm’s length examiner is knowledgeable in the field and comes fresh to the examination. They must not be (or have been) a member of the supervisory committee, or have been connected with the thesis research in a significant way. The examiner should not have been associated with the student, outside of usual contact in courses or other non-thesis activities within the University, nor be related to the student or supervisor(s). The arm’s length examiners should not be a former supervisor or student of the supervisor(s).’ The supervisor, often in discussion with the student, selects and invites the additional examiners to be on the committee.
- It is the responsibility of the Supervisor to inform the NMHI office of the UofA external examiner and the non-UofA external examiner.

The exam chair will be appointed by the NMHI office from among the members of the NMHI graduate committee.

Purpose of the Examination

The purpose of the final PhD examination is to assess the student’s knowledge of the literature relevant to their research area, understanding of the procedures used to collect and analyze their data, understanding of the significance of their research in the context of their research area and knowledge of the limitations and pitfalls of their chosen methodology. The PhD thesis must include the results of original investigations and analyses and be of such quality as to merit publication; furthermore, it must constitute a substantial contribution to the knowledge of the student's field of study.

Role of the Examination Committee

The committee will review the thesis document and conduct an oral examination to test the student's knowledge of the thesis subject and of related fields. The final decision of the examination committee will be based both on the quality of the thesis document and on the student’s performance in defense of that document.
All regulations regarding the preparation of the thesis are governed by FGSR.

Preparing for the Examination

1. External Examiner outside of the University of Alberta
2. Once an external examiner has been chosen by the Supervisor, the Supervisor must complete the Approve External Reader or Examiner for Final Doctoral Oral Exam form required by FGSR (found in the forms cabinet on the FGSR website) a CV for the External Examiner as well as an ‘FoMD PhD External Examiner Conflict of Interest Checklist’
3. The NMHI office will forward documents to the graduate programs advisor in FoMD for Faculty Approval. The external invitation, CV and conflict of interest checklist must be submitted to the NMHI office at least six weeks ahead of the exam date.
4. Once approved by FoMD, the external examiner form will be sent directly to FGSR. The external will receive an official invitation letter from the NMHI signed by the graduate coordinator. At that point neither the supervisor nor student can have any contact with the external. The administrator will inform the student and supervisor when the invitation has been sent
5. In the letter of invitation sent to the external examiner by the NMHI, the external examiner is requested to prepare and send to the graduate coordinator, at least 1 week in advance of the examination, a brief written commentary (approximately 2 to 3 pages) on the structure, methodology, quality, significance and findings of the thesis. The commentary should not be given to the student prior to the examination.
6. Very limited funding is available from the NMHI for the travel required by the external examiner. A written request must be made to the NMHI Director. There is also funding from FGSR to cover the costs associated with bringing in external examiners; Supervisors must apply for this funding first and submit the decision of the request to the NMHI Director with their request.

Preliminary Acceptance of Thesis

Before the final exam can be scheduled members of the supervisory committee are required to recommend, on the ‘Preliminary Acceptance of Thesis’, that the thesis is acceptable for examination. The form must be submitted to the NMHI office by the student.

The Preliminary Acceptance of Thesis form(s) must be submitted by the student to the NMHI office at least 6 weeks before the date of the exam. The committee members do not have to all sign the same form. The external examiner must receive a copy of the thesis at least one month ahead of the exam.

Once the signature forms have been received, the administrator will inform the supervisor that he/she can now set the date, time, and place of the exam. The supervisor must inform the administrator once this information is confirmed.

For the public seminar, the student can send the title and picture for an NMHI poster for advertisement.

Examination Chair

A chair will be arranged through the NMHI office from among the members of the neuroscience graduate committee after the administrator has received the signatures from the supervisory committee and after the supervisor has informed the administrator of the date, time, and place of the exam.
Once the chair is arranged, the supervisor and student will be informed. The student then must provide a hard or PDF copy of the thesis to the chair.

**University of Alberta (Internal) External Examiner (arm’s length)**

After the student’s supervisory committee preliminarily accepts the thesis for examination, the student must provide the internal external (arm’s length) examiners with a hard copy or PDF of the thesis, whichever is preferred.

**FGSR-Required Form**

Once the examination has been set and the chair arranged, the administrator will email the supervisor the FGSR form ‘Notice of Examining Committee & Examination Date.’ The supervisor is required to sign and return the form back to the administrator for the graduate coordinator’s signature.

The administrator must provide FGSR with the ‘Notice of Examining Committee & Examination Date’ form at least 3 weeks prior to the exam.

**Examination Seminar**

The examination will be preceded by a 30 minute to one hour public seminar and question period that will be attended by the examining committee and other interested individuals. The student must provide a seminar title and short abstract to the NMHI office at least 2 weeks in advance of the exam so that the seminar notice can be circulated. The seminar is usually held in the same room as the exam if the room is appropriate. It is the responsibility of the Supervisor to arrange for the venue of the seminar.

**Format of the Examination**

After a brief break following the public seminar the examining committee and the student reconvene for the formal final examination. After initial introductions are made, the student leaves room while the committee discusses the student’s performance in the program and establishes the order of questioning.

It is generally agreed that the most time should be allotted to the internal/external member and the external examiner and the least to the supervisor. In this way new and challenging questions are asked in place of reiteration of questioning already utilized to develop the student and enhance the research. Examiners should avoid discussions among themselves that exclude the student. They should not lecture but should ask detailed questions about the thesis and occasional broad, disciplinary questions. Typographical and stylistic errors should not take up examination time.

At the close of the examination the student is asked if they have any final questions or comments before they asked to withdraw.

For the adjudication, no final verdict should be rendered without each examiner having given an opinion. Two opinions will be sought: (1) on the acceptability of the thesis; and (2) on the acceptability of the defence. When a positive conclusion is obvious, some time should be spent on discussing the future of the thesis and the research area.

The Student is invited back into the room and the Chair announces the decision and provides feedback on the committee’s discussions regarding the strengths and weaknesses of the thesis and the thesis defence.
Possible Outcomes of the Examination

One of the following outcomes of the doctoral final is appropriate; Adjourned, Pass, Pass Subject to Revisions or Fail.
11. Time Limit for Submission of Doctoral Theses to FGSR

Following completion of the final oral examination at which the thesis is passed or passed subject to revisions, the student shall make the appropriate revisions where necessary and submit the approved thesis to the FGSR within 6 months of the date of the final oral examination. The Neuroscience and Mental Health Institute may impose earlier deadlines for submitting revisions.

If the thesis is not submitted to the FGSR within the 6 month time limit, the student will be considered to have withdrawn from the program. After this time, the student must apply and be re-admitted to the FGSR and register again before the thesis can be accepted.

If the final oral examination is adjourned, the 6 month time limit will take effect from the date of completion of the examination where the thesis was passed with or without revisions. To be eligible for convocation, all doctoral students must submit their thesis to the FGSR for approval before the deadline dates set out in the Academic Schedule of the Calendar. Students must also ensure that they are registered in the appropriate thesis course in their last registration prior to convocation.

Submission of Final Thesis – MSc and PhD

‘To be eligible for convocation, all students in a thesis degree program must present and defense a thesis embodying the results of their research’ – FGSR. The NMHI requires all graduating students to submit 1 bound copy of their thesis. Please note that the color of the book binding is “Dark Green” for Neuroscience. This copy will be added to the permanent library of the Neuroscience and Mental Health Institute.

Please visit FGSR’s website for academic requirements for your thesis preparation, requirements & deadlines.

- Neuroscience Students will be required to submit a hard copy of the thesis to the Neuroscience and Mental Health Institute office.

- Students may choose to have additional copies printed for Supervisors or personal use but this is not required.

- Please submit your ‘University of Alberta Thesis/Dissertation Non-Exclusive License’ and decide if you will be restricting access to your thesis which will be required before submitting your thesis to FGSR.
12. Financial Information
Studentships from the Neuroscience and Mental Health Institute

A limited number of graduate research assistantships are available through the NMHI. In addition, graduate teaching assistantships and research assistantships may be available through one of the faculties or departments participating in the graduate program in Neuroscience or from research grants held by individual investigators. Other funding is provided by scholarships awarded to students by federal and provincial agencies such as the Canadian Institutes of Health Research (CIHR), Natural Sciences and Engineering Research Council (NSERC), Alberta Innovates Health Solutions (AIHS) and the Provincial Government of Alberta. Many private foundations also have scholarship programs to support graduate students. Students are expected to apply for external funding.

Scholarships
A number of University of Alberta and private scholarships are available to NMHI graduate students. Students are responsible for researching scholarship eligibility and deadlines on FGSR’s website. Emails are sent out as reminders to students to ensure that they submit their applications to the NMHI (internal deadlines) to be reviewed by the graduate committee.

Fees
Graduate student fees and tuition are regulated by the University. It is the student’s responsibility to track all fees and pay all amounts owing by the specified deadlines.
13. Convocation

The University of Alberta holds two convocations each year. A spring convocation in June and a fall convocation in November.

Student must complete all the following steps before the convocation deadlines (early October and mid-April; varies from year to year) to be eligible for convocation.

- **Apply for convocation within Bear Tracks:** All applications for convocation are subject to review and approval by the FGSR. Applying to convocate on Bear Tracks does not guarantee convocation.

- **Ensure the Department has sent the appropriate program completion form to the FGSR.**

- **Prepare and submit thesis to the FGSR.**

- **Note that convocation approval requires payment of all outstanding fees to ualberta.**

- **FGSR Guidelines for Convocation**

- **Office of the Registrar information regarding convocation**
14. Resources

The Faculty of Medicine & Dentistry provides Education Resources for all students to assist and support their academic journey.

The Office of Advocacy & Wellbeing is a counselling resource for both academic and personal well-being.

Campus Resources free for students:

University of Alberta Sexual Assault Centre Phone: 780-492-9771 Location: 2-705SUB, University of Alberta Webpage: www.sac.ualberta.ca The University of Alberta Sexual Assault Centre provides a safe place on campus where unconditional support, confidentiality, respect and advocacy are available for those affected by sexual assault. The Sexual Assault Centre strives for a campus community free of sexual violence. The Sexual Assault Centre offers services for survivors of sexual assault or stalking and their supporters regardless of gender.

Peer Support Centre Phone: 780-492-HELP (4357) (Primary) 780-492-4268 (Administration line) Location: 2-707 SUB, University of Alberta Webpage: www.su.ualberta.ca/services/psc/ The Student Support Centre is operated by student volunteers who are all trained to provide telephone, appointment or drop-in crisis intervention, suicide prevention, and supportive listening.

Free Drop-In Mental Health Workshops Learn strategies to deal with common mental health concerns like depressions, anxiety, relationship break-ups, and more with workshops through Counselling and Clinical Services.
